SDDOT LOCAL ROADS PLAN

Chapter 9 Non-Section Plan Examples

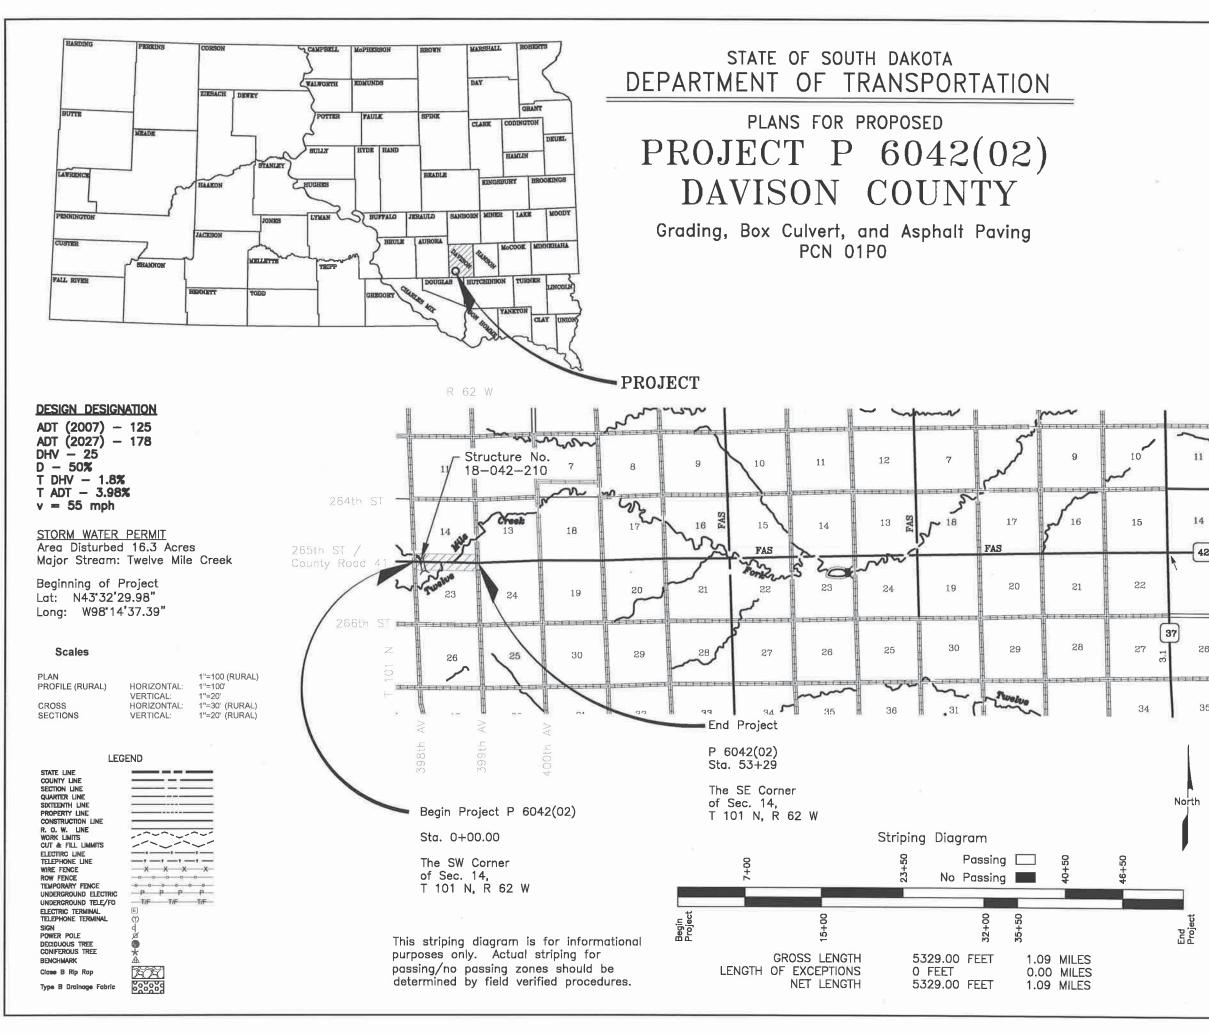

Most local government projects fall under the non-section method for plans assembly. The order of plan sheets can be found in Chapter 18 of the SDDOT Road Design Manual under the 'Non-Section Method' section. Links to the most current bid items, downloadable files, standard plates, and the CADD Procedures Manual can be found in the 'Introduction' section.

https://dot.sd.gov/doing-business

Examples of Non-Section plans for LGA projects can be found on the following pages:

- 3 thru 68 Grading & Surfacing Non-Section Plans
- 69 thru 111 Structure Non-Section Plans

Numerous railroad ties are in place as fence corners on the south side of the project. These shall be removed and stockpiled for the landowner as part of Incidental Work, Clearing.

WORK TO BE PERFORMED BY DAVISON COUNTY

The County will perform the following items without Federal Participation:

- 1. Arrange for Right Of Way and temporary and permanent easements.
- 2. Arrange for Utility adjustments.
- 3. Arrange for Permanent signing,
- 4. Removal of silt fence when vegetation has become established in areas where permanent seeding is required.

GRADING OPERATIONS

Water for Embankment is estimated at the rate of 10 gallons of water per cubic yard of Embankment minus Waste. Water for Granular Material is estimated at 10 gallons of water per cubic yard of Aggregate Base Course.

The estimated cubic yards of excavation and/or embankment required to construct outlet ditches, ditch blocks, and approaches are included in the earthwork balance notes on the profile sheets.

Special ditch grades and other sections of the roadway different than the typical section shall be constructed to the limits shown on the cross sections. If significant changes to the cross sections are necessary during construction, the Engineer shall contact the Designer for the proposed change.

Generally, all shallow inlet and outlet ditches as noted on the plan sheets shall be cut with a 10-foot wide bottom with 5:1 backslopes. However, the Engineer may direct the Contractor to adjust the ditch width for proper alignment with the drainage structure.

Temporary fence and/or permanent fence shall be placed ahead of the grading operation unless otherwise directed by the Engineer.

RESTRICTED WORK AREA

The Contractor's work limits shall be confined to the area bounded within the Temporary Construction Easement Areas and Right-of-way. These will be marked in the field prior to beginning topsoil removal.

TYPE II FIELD LABORATORY

The lab shall be equipped with an internet connection such as DSL, cable modem, or other approved service. The internet connection shall be provided with a multi-port wireless router. The internet connection shall be a minimum speed of 512 Kb unless limited by job location and approved by the DOT. Prior to installing the wireless router the Contractor shall submit the wireless router's technical data to the Area Office to check for compatibility with the state's computer equipment. The internet connection is intended for state personnel usage only.

The Contractor's personnel are prohibited from using the internet connection unless pre-approved by the Project Engineer. All costs associated with the phone including purchasing, installation, disconnection, monthly line charges, local and long distance calls, and incidentals involved in the installation. maintenance, and disconnection of the phone (including attachments) shall be incidental to the contract unit price per each for "Type II Field Laboratory

UTILITIES

Central Electric has a 7,200 volt, 3-phase main feeder line along the length of this project, mostly in private land. Two road crossing will be required, one at each end of the project. Central Electric should have this work complete by mid-may and should not impact the Contractor's schedule. Contact Brian Bulge at 996-7516 for further information.

Santel Communications has two lines along the length of this project, one of which is a fiber optic line. They are located on the south side of the road, one in the ditch and one near the old right of way line. Both lines will need to be relocated. Contact Mark Wilson at 796-4411 for more information.

CLEARING

Before clearing activities begin, the Contractor shall contact the Engineer ensure Temporary Construction Easement limits and daylight lines are staked. If the trees or shrubs that are suppose to remain within the limits of work are damaged or destroyed by the Contractor, the Contractor shall replace them with the same size and type at the Contractor's expense. Clearing shall include all trees, shrubs, stumps, and root balls within the project work limits. Extra large trees located very close to the outside limits of work limits can be reviewed with the Engineer and landowners on a case by case basis. Otherwise, trees to be removed are called out as shown on the Plan and Profile sheets. Trees and shrubs to be removed are so indicated by lighter shading versus existing trees to remain.

STA to STA 0+29 to 11+25 2+61 to 22+30 11+79 to 22+2 22+81 to 45+0 22+96 to 52+2 45+70 to 52+34

Numerous railroad ties are in place as fence corners on the south side of the project. These shall be removed and stockpiled for the landowner as part of Incidental Work, Clearing,

ARCHAEOLOGICAL SITE

Two weeks prior to commencing grading operations, the Contractor shall contact Jim Donohue, State Archaeological Research Center (SARC), at 605-394-1936, so that a qualified archaeologist can stake an archaeological site (39DV55). This site is in the vicinity of the project north of the existing box culvert (STA 8+00, Left) and outside the construction limits. The archaeologist will delineate an area not to be disturbed and the Engineer will set lath and flagging for this area as designated "keep out".

WATER SOURCE

The Contractor shall not withdraw water with equipment previously used outside the State of South Dakota without prior approval from the DOT Environmental Office.

The Contractor shall not withdraw water directly from streams of the James, Big Sioux, and Vermillion watersheds without prior approval from the DOT Environmental Office.

The DOT Environmental Office contact is the Environmental Project Scientist, 605-773-3268. The WATER SOURCE plan note does not relieve the Contractor of his/her responsibility to obtain the necessary permits from other agencies such as the Department of Environment and Natural Resources (DENR) and the United States Army Corps of Engineers (COE).

WORK AFFECTING WATERWAYS WATER QUALITY

Surface Water Quality

The Contractor is advised the South Dakota Surface Water Quality Standards, administered by the Department of Environment and Natural Resources (DENR), apply to this project.

Twelve Mile Creek and the North Branch of Twelve Mile Creek are classified as a warm water, semi permanent fisheries with a total suspended solids standard of 150 milligrams/liter.

Twelve Mile Creek and the North Branch of Twelve Mile Creek is classified as fish and wildlife propagation, recreation, irrigation and stock watering waters. Because of these beneficial uses, special construction measures may have to be taken to ensure that this water body is not impacted.

Surface Water Discharge

If construction dewatering is required, the Contractor is required to obtain a Surface Water Discharge Permit from the DENR. Contact the DENR Surface Water Program at 605-773-3351 to apply for a permit.

Twelve Mile Creek and the North Branch of Twelve Mile Creek are classified as a warm water, semi permanent fishery with a Surface Water Discharge standard of 150 milligrams/liter total suspended solids.

Twelve Mile Creek and the North Branch of Twelve Mile Creek is classified as fish and wildlife propagation, recreation, irrigation and stock watering waters. Because of these beneficial uses, special construction measures may have to be taken to ensure that this water body is not impacted.

Storm Water

The Contractor is advised this project is regulated under the Phase II Storm Water Regulations and must receive coverage under the DENR General Permit for Construction Activities. A Notice of Intent (NOI) will be submitted to DENR a minimum of 15 days prior to project start by the DOT Environmental Office. A letter must be received from DENR that acknowledges project coverage under this general permit before project start. The Contractor is advised that permit coverage may also be required by offsite activities, such as borrow and staging areas, which are the responsibility of the Contractor.

A major component of the storm water construction permit is development and implementation of a storm water pollution prevention plan (SWPPP). This plan is a joint effort and responsibility of the DOT and the Contractor. The SWPPP is a dynamic document and is to be available on-site at all times. Information on storm water requirements and SWPPP are available on the following websites:

DOT: <u>http://www.sddot.com/pe/projdev/environment_stormwater.asp</u> DENR: <u>http://www.denr.sd.gov/des/sw/stormwater.aspx</u>

A. SEASONAL WORK RESTRICTIONS

The State of South Dakota has designated warm water fisheries associated with this project. Placement of fill and/or in-stream work should not take place during the Seasonal Work Restriction to avoid conflicts with spawning fish. If flows during this time are nonexistent or extremely low, the seasonal use restriction may not be applicable. The Contractor shall not conduct instream work during the Seasonal Work Restriction without prior approval from the Environmental Project Scientist of the DOT Environmental Office, 605-773-3268.

TABLE OF WARM WATER FISHERIES

Stream Name	Stream Classification	Seasonal Work Restriction
Twelve Mile Cr	Warm Water	April 1 to June 30
N Branch Twelve	Warm Water	April 1 to June 30
Mile Creek		•

B. <u>CONSTRUCTION PRACTICES FOR STREAMS INHABITED BY</u> TOPEKA SHINER

The US Fish and Wildlife Service (USFWS) has designated Topeka Shiner Streams associated with this project. The Contractor shall adhere to the "Special Provision for Construction Practices in Streams Inhabited by the Topeka Shiner".

The DOT contacts for Topeka Shiner issues are the Project Engineer and the Environmental Project Scientist of the DOT Environmental Office, 605-773-3268.

TABLE OF PROTECTED WATERWAYS (TOPEKA SHINER STREAMS)

 Station	Stream Name	
4+50	N Branch Twelve Mile Creek	
8+20	N Branch Twelve Mile Creek	
22+55	Twelve Mile Creek	
31+50	Twelve Mile Creek	

C. <u>CONSTRUCTION PRACTICES FOR TEMPORARY WORKS IN</u> <u>PROTECTED WATERWAYS</u>

No excavation shall be made below the ordinary high water elevation in Protected Waterways outside of caissons, cribs, cofferdams, steel piling, or sheeting; and the natural streambed shall not be disturbed without permission from the Engineer. Refer to the Table of Protected Waterways for ordinary high water elevations.

All dredged or excavated materials shall be placed at a site above the ordinary high water elevation in a confined area (not classified as a wetland) to prevent return of such material to the waterway.

The construction of temporary work platforms, crossings, or berms below the ordinary high water elevation will be allowed provided that all material placed below the ordinary high water elevation consists of Class B or larger riprap.

All temporary caissons, cribs, cofferdams, steel piling, sheeting, work platforms, crossings, and berms shall be removed with minimal disturbance

to the streambed. Proper construction practices shall be used to minimize increases in suspended solids and turbidity in the waterway.

Bridge berms, wing dams, traffic diversions, channel reconstruction, grading, etc. shall be constructed in close conformity with the plans to ensure that the hydraulic capacity of the waterway is not changed.

Temporary waterway crossings required for the Contractors construction operations shall be constructed with an adequate drainage structure size and minimum fill height to reduce the potential for upstream flooding. The Contractor will be responsible for sizing the temporary drainage structure for these crossings.

HISTORICAL PRESERVATION OFFICE CLEARANCES

To obtain State Historical Preservation Office (SHPO) clearance, a cultural resources survey may need to be conducted by a qualified archaeologist. In lieu of a cultural resources survey, the Contractor could request a records search from Jim Donohue, State Archaeological Research Center (SARC). Provide SARC with the following: a topographical map or aerial view on which the site is clearly outlined, site dimensions, project number, and PCN. If applicable, provide evidence that the site has been previously disturbed by farming, mining, or construction activities with a landowner statement that no artifacts have been found on the site. The Contractor shall arrange and pay for the cultural resource survey and/or records search.

If any earth disturbing activities occur within the current geographical or historic boundaries of any South Dakota reservation, the Contractor shall obtain Tribal Historical Preservation Office (THPO) clearance. If no THPO exists, the required SHPO clearance shall suffice, with documentation of Tribal contact efforts provided to SHPO.

To facilitate SHPO or THPO responses, the Contractor should submit a records search or cultural resources survey report to the DOT Environmental Engineer, 700 East Broadway Avenue, Pierre, SD 57501-2586 (605-773-3268). Allow 30 days from the date this information is submitted to the Environmental Engineer for SHPO/THPO approval. The Contractor is responsible for obtaining all required permits and clearances for staging areas, borrow sites, waste disposal sites, and all material processing sites. The Contractor shall provide the required permits and clearances to the Engineer at the preconstruction meeting.

WASTE DISPOSAL SITE

The Contractor will be required to furnish a site(s) for the disposal of construction/demolition debris generated by this project.

Construction/demolition debris may not be disposed of within the County ROW.

STATE OF	PROJECT	SHEET	TOTAL SHEETS
SOUTH DAKOTA	P 6042 (02)	6	65

PROFESSIO

WASTE DISPOSAL SITE - CONTINUED

- Construction/demolition debris consisting of concrete, asphalt concrete, 1.... or other similar materials shall be buried in a trench completely separate from wood debris. The final cover over the construction/demolition debris shall consist of a minimum of 1 foot of soil capable of supporting vegetation. Waste disposal sites provided outside of the County ROW shall be seeded in accordance with Natural Resources Conservation Service recommendations. The seeding recommendations may be obtained through the appropriate County NRCS Office. The Contractor shall control the access to waste disposal sites not within the County ROW through the use of fences, gates, and placement of a sign or signs at the entrance to the site stating "No Dumping Allowed".
- 2. Concrete and asphalt concrete debris may be stockpiled within view of the ROW for a period of time not to exceed the duration of the project.

Prior to project completion, the waste shall be removed from view of the ROW or buried and the waste disposal site reclaimed as noted above.

The above requirements will not apply to waste disposal sites that are covered by an individual solid waste permit as specified in SDCL 34A-6-58, SDCL 34A-6-1.13, and ARSD 74.27:10:06.

Failure to comply with the requirements stated above may result in civil penalties in accordance with South Dakota Solid Waste Law, SDCL 34A-6-1.31.

All costs associated with furnishing waste disposal sites, disposing of waste, maintaining control of access (fence, gates, and signs), and reclamation of the waste disposal sites shall be incidental to the various contract items.

TABLE OF UNCLASSIFIED EXCAVATION (CuYd)

Excavation	51,557
Undercut	12,586
Box Culvert Installation	3,746
Total	67,889

Plan quantities will be used for final payment unless changes are approved by the Engineer and then the respective bid items will be adjusted accordingly.

Note that Box Culvert Undercut is not included in this table and is paid under its own item.

Stockpiling topsoil estimated at 7,651 cubic yards is accounted for in this unclassified excavation table. Placing Topsoil is included under the bid items and notes for Erosion Control. Waste (earthen materials only) shall be used to fill in the stock dam located right of STA 32+00. See note below. Also, waste shall be used to rebuild six field approaches estimated at 200 cubic yards each.

UNDERCUTTING

In all cut sections, the earthen sub-grade shall be undercut 2 feet below finished sub-grade. The undercut material or other suitable material, as directed by the Engineer, shall be replaced and re-compacted to the density specified for the section being constructed. All sub-grade shall be compacted to at least 95% maximum dry density. Moisture conditioning may be required.

Shallow embankment sections, fills less than 2 feet in height measured at the finished subgrade shoulders, shall be undercut to assure a minimum 2 foot height of earth embankment for the entire width of roadbed. The upper 6 inches of undercut material that consists of topsoil with a high humus content shall be used as topsoil, placed in the fill-slopes outside the shoulders of the earthen subgrade, or placed in the lower portion (below 4 feet) of fills which are over 4 feet in height. The remaining undercut soil and soil obtained from adjacent excavation (excluding upper 6 inches) shall then be replaced and compacted to the density specified for the section being constructed.

A disk designed and constructed for construction purposes shall be in use as per Section 120.3, Standard Specifications.

The plan shown quantity will be the basis of payment. However, if there are additional areas of undercut other than what is shown in the plans, the Engineer shall direct removal of these areas and the additional areas will be measured according to the Engineer.

HAUL

Included in the estimate of quantities is Haul. It is not a pay item and is for information purposes only. Quantity calculated (CuYdSta) for moving unclassified excavation material to the locations where it is needed throughout the earthwork balance

MUCK EXCAVATION

500 cubic yards of Muck Excavation is included for bidding purposes. Muck Excavation may be encountered during the removal of the existing box culvert and associated channel realignment. Muck Excavation is assumed to be required for the stock dam and area inside the roadway prism. This is assumed to be 2,760 square feet x 2 feet deep or, 204 cubic yards.

Ordinary excavation and removal of the existing box culvert is being paid for under the item Incidental Work-Grading. If the areas designated as muck excavation can be removed with similar equipment and procedures as used for unclassified excavation, the material shall be measured and paid for as "Unclassified Excavation"

Mucking Silt Fence.

Muck excavation consists of the removal of highly organic and/or highly saturated material. Highly organic muck material shall not be used in the embankment but may be used as topsoil. Non-organic muck material may be used as embankment outside of the fill subgrade shoulder if it is properly handled and dried prior to placement in the embankment.

Field measurement of all muck excavation will be made and agreed to in the field prior to performing muck excavation. Engineer orders additional excavation, or when the Engineer determines, in accordance with Section 120.3.A.1 of the Standard Specifications, that the classification of excavation be changed.

INCIDENTAL WORK, GRADING

This bid item shall cover work associated with the removal of existing pipe culvert at approaches and grading associated with building 6 new approaches. Note that 200 cubic yards of additional unclassified excavation for each approach is included under Unclassified Excavation for this purpose. Final location of field approaches will be determined in the field based on land owner preferences. Farm field approaches shall comply with Standard Detail 320.10.

Davison County will remove all signs prior to construction. Davison County will also set new signs prior to opening to traffic. There are 19 existing signs including stop signs and street signs, some or all of which will be removed at the discretion of the County. However, the stop signs (4) may be temporarily needed during traffic control operations so they will need to be removed and reset by the Traffic Control subcontractor as required. Also, the street name signs (2) located at each end of the project may be removed and reset as part of incidental work or the County may choose to install new ones as part of their full signage installation. 45+40 R	Take out 40' of 18" CMP, rebuilt field entr.

INCIDENTAL WORK, GRADING (removal of existing box culvert)

Station	Remarks	
8+22	Remove existing 10' x 10' RCBC	
	Keep in place until new box completed	

This bid item shall also cover all costs associated with the removal of the existing 10'x10' RCBC including back fill and compaction. Compaction of subgrade shall occur at least every 2' while obtaining at least 95% of maximum dry density throughout the back fill. Compaction of earth embankment and box culvert backfill material shall be governed by the Specified Density method.

For bidding purposes, the existing box culvert is a 10' x 10' cast in place box culvert with flared wing walls in good condition approximately 50 feet long and is buried to its invert approximately 15 deep as measured from the bottom of the undercut.

SALVAGE RIPRAP

Starting at STA 6+36 and 32' R, an old riprap apron shall be salvaged for later use on site. This area is estimated to be 1000 square feet and the uneven and washed out riprap appears to be approximately 1 feet deep. No field measurements will be made and the basis of payment to salvage this riprap is based on 37 cubic yards.

FILL IN MAN-MADE STOCKDAM

Approximately 1,955 cubic yards of waste excavation shall be used for filling in the man made stock dam located right of STA 31+00 to STA 32+50. The existing surface area of the pool is 6,600 square feet and is estimated to be 8 feet deep from Elev 1517.7'. This is considered incidental to excavation operations whereby wasted excavated material shall be used to backfill.

During back fill of this stock dam, ordinary compaction procedures shall apply as progress is made and the subgrade begins to firm and support construction equipment. Formal compaction to 92% standard proctor density by mechanical means shall be done in two foot lifts. The last foot of subgrade fill and topsoil shall not be compacted. Filling stock dam shall not be used as an on-site waste receptacle for garbage, debris, etc. No deleterious material other than native soils shall be placed as fill into the stock dam. It is assumed that pumping will be required for draw down. Any pumping will be incidental to other bid items. Pump discharge area shall not cause erosion or sediment transport. Use existing or new erosion control items as necessary.

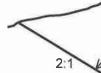

At the bottom of the ponded area and within the limits of roadway construction. Muck Excavation is assumed to be required. This is assumed to be 2,760 square feet x 2 feet deep or, 204 cubic yards.

EXCAVATION FOR REINFORCED CONCRETE BOX CULVERT INSTALLATION

Included in the quantity of Unclassified Excavation are 3,746 cubic vards of excavation for installation of reinforced concrete box culverts.

All work necessary to excavate a trench for installation of reinforced concrete box culverts including labor, equipment, and incidentals shall be incidental to the contract unit price per cubic yard for Unclassified Excavation. Payment for excavation of reinforced concrete box culverts shall be based only on plans quantity and measurement of these excavation quantities during construction shall not be performed.

The excavation quantities for installation of reinforced concrete box culverts are not included with the earthwork balance quantities on the plans profile sheets. The quantities computed for excavation of the reinforced concrete box culverts are based on the limits shown in the drawing below. For pipe bedding material, see Section 421 of Standard Specifications. Compaction of earth embankment and box culvert backfill material shall be governed by the Specified Density method.

INSTALLATION

INSLOPE TRANSITIONS

Inslope transitions will be required at various drainage structures and stream channel changes. Refer to Standard Plate 120.05 for details. Inslope transitions have been accounted for in the mass haul and grading calculations as shown in the Table of Excavation Quantities By Balances.

Station	L/R	Comment
4+40	L	No inslope change, CH-CH #1

		Quantity
Station		(CuYd)
7+86		3,746
	Total:	3,746

TABLE OF INSLOPE TRANSITIONS

SALVAGED ITEMS

All salvaged items noted on the plans shall be salvaged for future highway use and hauled to the Davison County Highway shop as directed by the Engineer. The County wants all CMP pipe salvaged. See Table of Pipe Quantities. Care shall be taken not to damage the structural properties of the items during dismantling and transporting. All broken concrete and materials not salvaged shall be disposed of in accordance with the Standard Specifications. All costs for salvaging and transporting the items shall be incidental to the contract lump sum price for "Incidental Work, Grading". Before preparing his/her bid, the Contractor shall make a visual inspection of the project to verify the extent of the work and material involved.

CORRUGATED METAL PIPE

Corrugated metal pipes shall have 2 ³/₃-inch X ¹/₂-inch corrugations for 42-inch and smaller round pipe and 48-inch and smaller arch pipe unless otherwise stated in the plans. Corrugated metal pipes shall have 3-inch X 1-inch or 5-inch X 1-inch corrugations for 48-inch and larger round pipe and 54-inch and larger arch pipe unless otherwise stated in the plans.

PIPE FOR APPROACHES and INTERSECTING ROADS

Class II reinforced concrete pipe may be substituted for corrugated metal pipe at approaches and intersecting roads at no additional cost to the County or State.

TRAFFIC DETOUR – MAINTENANCE OF TRAFFIC DIVERSION

A 3-mile detour will be required during construction and shall be installed according to these plans. Maintenance (occasional blading and retrieval on the graveled portions) of the 3 mile detour will be the Contractor's responsibility during construction and shall be included within the "Maintenance of Traffic Diversion" bid item. For bidding purposes, the Contractor shall assume that one complete maintenance operation will be required.

Davison County will supply road base material as needed. Road defects within the detour and other safety concerns shall be brought to the Engineer's attention immediately. Cross-slopes of existing gravel roads on detour shall be maintained to be between 3% and 4% while maintaining a center crown.

Installation and removal of the traffic detour shall meet all requirements as set forth in the South Dakota Surface Water Quality Standards. As the detour route is over existing county and township roads, no impacts to water quality are expected.

Adjacent landowners will require access into their fields during construction. The contractor shall coordinate with adjacent landowners and make every reasonable accommodation to provide access into their fields.

EXISTING GRANULAR BASE

This is an information note. The existing roadway is comprised of approximately 1 inch of reclaimed asphaltic road seal that has been ground into the top four inches of the existing aggregate base course. There is approximately 12 to 13 inches of this mixture of aggregate base course in place through the length of this project. Tree sap was used in the past as a bonding agent. For this reason, the existing aggregate base course cannot be used to supplement the new aggregate base course and may only be used as ordinary material under unclassified excavation operations and shall be treated as ordinary sub-grade. This material cannot be used where aggregate base or pipe bedding material is specified. However, the re-use of this material as back fill is encouraged. Normal undercutting procedures and compaction procedures shall be followed.

TYPE 2 RIGHT-OF-WAY FENCE

Right-of-way fence shall be installed as shown in the plans in accordance to Section 620 of the Standard Specifications and the standard plates. Brace panels shall be paid per each. Right-of-way fence will be measured and paid on a per foot basis including lengths of brace panels and wire gates.

Right-of-way fence shall be Type 2 with alternating wood and steel posts. The posts shall be placed within 1 foot of the right-of-way line on the land owner's property. The Owner's Representative and/or the Engineer will stake the corner post locations.

Final land negotiations with landowners may alter final locations of permanent right of way fence and whether it is installed on a given parcel. For bidding purposes, it is assumed that all landowners will want new right of way fence installed.

TYPE 1 TEMPORARY FENCE

Temporary fence shall be installed on the south side (right of station line) of the project along the temporary construction easement line. This is on land owned by Sigmund and Neugebauer starting at STA 0+35.95 to STA 52+49.52. See ROW Layout sheets.

Temporary Construction Easement locations will be staked in the field by the Engineer. Pull posts, braces, and gates will be installed and maintained as required and will be considered incidental to the price per foot of Type 1 Temporary Fence. Existing access shall be perpetuated at existing approaches.

Any loss or damages experienced by landowners due to failure in temporary fence will be the Contractor's responsibility. Price per foot bid includes installation, maintenance, and removal. Landowner requests to change locations of gates and accesses will be paid for per foot of Remove Fence and installation of new Type 1 Temporary Fence. only.

SURFACING NOTES

BASE COURSE

Base Course shall consist of crushed material. A blend of Crushed recycled asphalt concrete and virgin materials may be used so long as materials comply with specifications and materials are preapproved by the Engineer. Base Course shall be from a contractor supplied source.

Base Course shall be placed to the dimensions and thickness indicated on the Typical Sections. Base Course shall be placed over prepared and approved subgrade after compaction of the undercut.

A quantity of 1,200 tons of base course has been added for bidding purposes in the event that unstable subgrade is encountered and requires further processing beyond ordinary undercutting, scarification, compaction, and moisture conditioning. Such digouts will be reviewed with the Engineer by the Contractor prior to proceeding with the use of this extra base course. Plan quantities for drainage fabric may be adjusted accordingly if needed. Weight tickets specific to this use of base course will be separate from regular base course within the **9**" section.

CLASS E ASPHALT CONCRETE

Virgin mineral aggregate for the Asphalt Concrete Composite shall conform to the requirements for Class E, Type 1. All other requirements for Class E shall apply.

The asphalt binder used in the mixture shall be PG 58-28, PG 58-34, PG 64-22, PG 64-28 or PG 64-34 Asphalt Binder.

Rates of Materials - The Estimate of Quantities is based on the following quantities of materials <u>per station</u>:

BASE COURSE	
Crushed Aggregate	162.75 tons
Water for Granular Material	1.95 MGal
MC-70 Asphalt for Prime	0.42 tons (32' wide or 0.3 gal / sq yd)
Blotting Sand for Prime	1.33 tons (24' wide at 10 lbs / sq yd)

CLASS E ASPHALT CONCRETE - 1st and 2nd 1.5" LIFTS

Crushed Aggregate	25.22 tons
PG 64-22 Asphalt Binder	1.61 tons
Total	26.83 tons per station

Tack Coat

0.07 tons

Tack coat (SS-1h or CSS-1h Emulsified Asphalt) shall be applied prior to each lift at the rate of 0.07 tons applied 31 feet wide (0.05 gallons per square yard).

Additional quantities have been included for paving 5' into the approaches as per Standard Plate 320.10.

PAVEMENT MARKING PAINT

The pavement marking paint and glass beads shall be furnished and applied by the Contractor. Materials shall meet the requirements of Sections 633, 980 and 981 of the Standard Specifications. All materials shall be applied as per manufacturer's recommendations. Pavement markings shall be installed in accordance with the most current edition of the Manual on Uniform Traffic Control Devices (MUTCD).

Glass beads in accordance with Section 981 shall be applied at the rate of 8 lbs/Gallon of paint. The cost of glass beads will be incidental to the cost per foot for "Pavement Marking Paint".

Measurement and payment for furnishing and applying the painted pavement marking will be made to the nearest foot. The approximate paint application rates for one pass on a 4" wide stripe shall be as follows:

> Yellow 250 feet per Gallon White 250 feet per Gallon

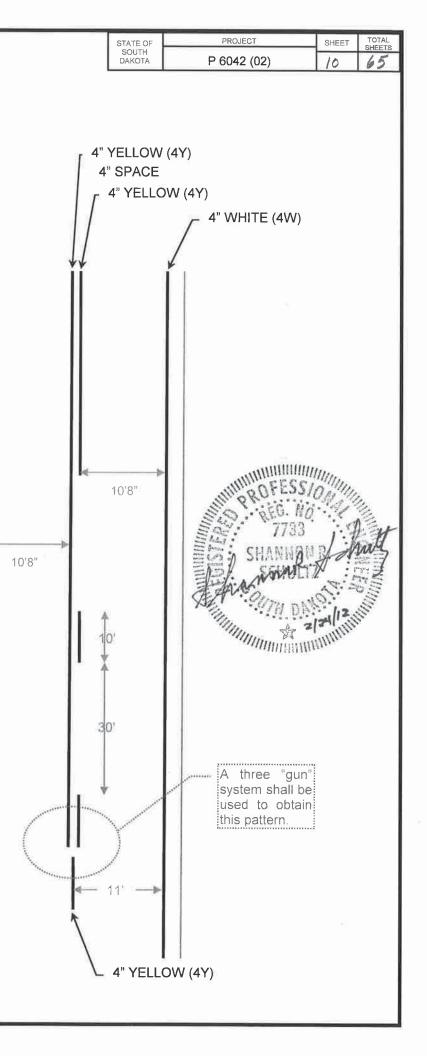

Traffic Control shall be incidental to the cost of application. The striper and advance and trailing warning vehicle shall be equipped with flashing amber lights or advance warning arrow panel if not done while project is under detour phase of traffic control.

The Contractor shall coordinate with the Engineer prior to the application of the permanent pavement markings. Permanent pavement markings shall not be placed without the approval of the Engineer. All materials shall be applied per manufacturer's recommendations. Surface shall be swept, broomed, or vacuumed clean prior to painting.

Pavement marking paint application shall be completed no sooner than 48 hours after completion of Asphalt Concrete Paving. The application of Permanent Pavement Marking shall be completed within 10 calendar days following the completion of the asphalt pavement.

Station	WB/ EB/ C	Length of Section (Ft)	Quantity (Ft of paint) 4Y	Quantity (Ft of paint) 4W

C = single skip down centerline for both lanes

PLACE TOPSOIL

The estimated amount of topsoil to be removed and replaced is 7,651 CuYd. All cost associated with removing and replacing the topsoil along areas to be resurfaced shall be incidental to the bid unit price per cubic yard of Placing Topsoil. Excavation of topsoil is accounted for the Unclassified Excavation quantities. Topsoil shall be stripped and stockpiled on site conveniently for placing. No topsoil is to leave the project area.

Soil borings show that there is approximately 6 inches of topsoil available and considered suitable for topping in-slopes, ditches, and back-slopes. This thickness of topsoil is considered to hold true for right-of-way area outside the back-slopes and in-slopes of the present grade. This includes low-velocity areas under the Type 3 Erosion Control Blanket prior to seeding.

DRILLS

In addition to the drills specified in Section 730 of the Standard Specifications, other types of drills including no-till drills will be allowed as long as they have baffles, partitions, agitators, or augers which keep the seed distributed throughout the seed box and the seed is planted at a depth of $\frac{1}{4}$ " to $\frac{1}{2}$ ".

PERMANENT SEEDING

The areas to be seeded comprise of all newly graded areas within the project limits except for the top of roadways and temporary easements under cultivation. All permanent seed shall be planted in the topsoil at a depth of $\frac{1}{4}$ " to $\frac{1}{2}$ ".

All seed broadcast must be raked or dragged in (incorporated) within the top $\frac{1}{4}$ " to $\frac{1}{2}$ " of topsoil when possible. This requirement may be waived by the Engineer during construction when raking or dragging is deemed not feasible by conventional methods. Type B Permanent Seed Mixture shall consist of the following:

Grass Species	Variety	Pure Live Seed (PLS) (Pounds/Acre)
Western Wheatgrass	Flintlock, Rodan, Rosana	7
Switchgrass	Dacotah, Forestburg, Nebraska 28, Pathfinder, Summer, Sunburst, Trailblazer	3
Indiangrass	Holt, Tomahawk	3
Big Bluestem	Bison, Bonilla, Champ, Pawnee, Sunnyview	3
Canada Wildrye	Mandan	2
	Total:	18

MULCHING (GRASS HAY OR STRAW)

Bales with noxious weed contamination will be rejected and the Contractor will be required to remove the contaminated bales from the project. Mulch rate is 4,000 pounds per acre placed uniformly after seeding followed immediately by punching in accordance with Standard Specification 732.

An additional 2.5 tons of Grass Hay or Straw Mulch has been added to the Estimate of Quantities for temporary erosion control on areas determined by the Engineer during construction for temporary stabilization.

EROSION BALES

Erosion bales for restraining the flow of water and sediment shall be placed at locations determined by the Engineer during construction. Refer to Standard Plate 734.02 for details.

Bales with noxious weed contamination will be rejected and the Contractor will be required to remove the contaminated bales from the project.

A quantity of 30 Erosion Bales has been included in the Estimate of Quantities for bidding purposes in the event that additional temporary sediment control measures are needed. Plan and Profile sheets do not call for Erosion Bales.

EROSION CONTROL WATTLE

Erosion control wattles for restraining the flow of runoff and sediment shall be installed at locations noted in the table and at locations determined by the Engineer during construction. Refer to Standard Plate 734.06 for details.

The Contractor shall provide certification that the erosion control wattles do not contain noxious weed seeds.

REMOVE EROSION CONTROL WATTLE

Erosion control wattles shall be removed BY COUNTY FORCES when vegetation is established. Some or all of the erosion control wattles may be left on the project until vegetation is established.

REMOVE AND RESET EROSION CONTROL WATTLE

Erosion control wattles may be removed and reset as necessary as work progresses. The erosion control wattles removed and reset shall be in useable condition. All costs for removing and resetting the erosion control wattles shall be incidental to the contract unit price per foot for "Remove and Reset Erosion Control Wattle". If a wattle location continues to wash out or fail, other erosion control measures shall be explored such as Erosion Bales or Silt Fence.

HIGH FLOW SILT FENCE

The high flow silt fence fabric provided shall be from the approved product list. The approved product list for high flow silt fence may be viewed at the following internet site:

http://apps.sd.gov/Applications/HC54ApprovedProducts/main.asp

High flow silt fence shall be placed at the locations noted in the table and at locations that will minimize siltation of adjacent streams, lakes, dams, or drainage areas as determined by the Engineer during construction. Refer to Standard Plate 734.05 for details.

MUCKING SILT FENCE

Mucking silt fence shall consist of removing muck trapped by the silt fence and spreading the material evenly over the adjacent area to conform to the existing grade.

REMOVE SILT FENCE

Silt fence shall be removed when vegetation is established BY COUNTY FORCES. Some or all of the silt fence may be left on the project until vegetation is established.

TYPE 3 EROSION CONTROL BLANKET

Type 3 Erosion control blanket shall be installed as per the typical sections shown for the channel changes at the locations noted in the table and at locations determined by the Engineer during construction.

The erosion control blanket provided shall be from the approved product list. The approved product list for erosion control blanket may be viewed at the following internet site:

http://apps.sd.gov/Applications/HC54ApprovedProducts/main.asp

The Contractor shall install erosion control blanket according to the manufacturer's installation instructions. An additional quantity of 42 square yards of Type 3 Erosion Control Blanket has been added to the Estimate of Quantities for temporary erosion control.

TABLE OF EROSION CONTROL BLANKET

The ditches shall be shaped for the erosion control blanket as specified on

TABLE OF TEMPORARY DIVERSION CHANNEL

The Contractor shall construct a temporary diversion channel in accordance with Standard Plate 734.30 at the locations listed in the following table.

	Quantity
Station	(Each)
8+22	1
Total:	1

The intent is to allow the North Branch of Twelve Mile Creek to continue to run through the existing box culvert as the diversion channel while the new box culvert is being installed. Therefore, work to build and maintain the temporary diversion channel should be minimal. Care shall be taken to protect the integrity of the subgrade and pipe bedding, back fill and compaction, of the new box culvert. Creek water shall not flow at any time through the area of the new box culvert installation until the culvert is 100% installed, sections tied and adjacent slopes have been back filled, compacted, fabric and rip-rap protection installed.

> Wetland Avoidance

Will construction and/or erosion and sediment controls impinge on regulated wetlands? Yes X No I If yes, the structural and erosion and sediment controls have been included in the total project wetland impacts and have been included in the 404 permit process with the USACE.

Storm Water Management (4.2 2.b., (1) and (2)) \geq

Storm water management will be handled by temporary controls outlined in "EROSION AND SEDIMENT CONTROLS" above, and any permanent controls needed to meet permanent storm water management needs in the post construction period. Permanent controls will be shown on the plans and noted as permanent.

Other Storm Water Controls (4.2 2.c., (1) and (2)) \geq

Waste Disposal

All liquid waste materials will be collected and stored in sealed metal containers approved by the project engineer. All trash and construction debris from the site will be deposited in the approved containers. Containers will be serviced as necessary, and the trash will be hauled to an approved disposal site or licensed landfill. All onsite personnel will be instructed in the proper procedures for waste disposal, and notices stating proper practices will be posted in the field office. The general contractor's representative responsible for the conduct of work on the site will be responsible for seeing waste disposal procedures are followed.

Hazardous Waste

All hazardous waste materials will be disposed of in a manner specified by local or state regulations or by the manufacturer. Site personnel will be instructed in these practices, and the

SOUTH DAKOTA	P 6042 (02)	14	65

individual designated as the contractor's on-site representative will be responsible for seeing that these practices are followed.

Portable sanitary facilities will be provided on all construction sites. Sanitary waste will be collected from the portable units in a timely manner by a licensed waste management contractor or as required by any local regulations.

Inspections will be conducted at least one time per week and after a storm event of 0.50 inches or greater.

All controls will be maintained in good working order. Necessary repairs will be initiated within 24 hours of the site inspection

Silt fence will be inspected for depth of sediment and for tears in order to ensure the fabric is securely attached to the posts and that the posts are well anchored. Sediment buildup will be removed from the silt fence when it reaches $\frac{1}{3}$ of the height of the

Sediment basins and traps will be checked. Sediment will be removed when depth reaches approximately 50 percent of the structure's capacity, and at the conclusion of the construction. Check dams will be inspected for stability. Sediment will be removed when depth reaches 1/2 the height of the dam.

All seeded areas will be checked for bare spots, washouts, and vigorous growth free of significant weed infestations.

Inspection and maintenance reports will be prepared on form DOT 298 for each site inspection, this form will also be used to document changes to the SWPPP. A copy of the completed inspection form will be filed with the SWPPP documents. The SDDOT Project Engineer and contractor's site

superintendent are responsible for inspections. Maintenance. repair activities are the responsibility of the contractor. The SDDOT Project Engineer will complete the inspection and maintenance reports and distribute copies per the distribution instructions on DOT 298.

Discharges from water line flushing.

> D Pavement wash-water, where no spills or leaks of toxic or hazardous materials have occurred.

Uncontaminated ground water associated with dewatering

Materials Inventory (4.2. 2.c.(2))

The following materials or substances are expected to be present on the site during the construction period. These materials will be handled as noted under the headings "EROSION AND SEDIMENT CONTROLS" and "SPILL PREVENTION" (check all that apply).

- \geq Concrete and Portland Cement
- \geq
- \triangleright Paints
- A Metals
- A Bituminous Materials

- Other: \geq

Spill Prevention (4.2 2.c.(2)) *

> Material Management

Housekeepina

- Only needed products will be stored on-site by the contractor.
- Except for bulk materials the contractor will store all materials under cover and in appropriate containers.
- Products must be stored in original containers and labeled.
- Material mixing will be conducted in accordance with the • manufacturer's recommendations.
- When possible, all products will be completely used before properly disposing of the container off site.
- The manufacturer's directions for disposal of materials and containers will be followed.
- The contractor's site superintendent will inspect materials storage areas regularly to ensure proper use and disposal.
- Dust generated will be controlled in an environmentally safe • manner.
- Vegetation areas not essential to the construction project will • be preserved and maintained as noted on the plans.
- = Hazardous Materials
 - Products will be kept in original containers unless the container is not resealable.
 - Original labels and material safety data sheets will be retained in a safe place to relay important product information.
 - If surplus product must be disposed of, manufacturer's label directions for disposal will be followed.
 - Maintenance and repair of all equipment and vehicles involving oil changes, hydraulic system drain down, degreasing operations, fuel tank drain down and removal, and other activities which may result in the accidental release of contaminants will be conducted on an impervious surface and under cover during wet weather to prevent the release of contaminants onto the ground.
 - Wheel wash water will be collected and allowed to settle out suspended solids prior to discharge. Wheel wash water will not be discharged directly into any storm water system or storm water treatment system.

 Potential pH-modifying materials such as: bulk cement. cement kiln dust, fly ash, new concrete washings, concrete pumping, residuals from concrete saw cutting (either wet or dry), and mixer washout waters will be collected on site and managed to prevent contamination of storm water runoff.

Product Specific Practices (6.8)

Petroleum Products

All on-site vehicles will be monitored for leaks and receive regular preventive maintenance to reduce the chance of leakage. Petroleum products will be stored in tightly sealed containers which are clearly labeled.

Fertilizers

Fertilizers will be applied only in the amounts specified by the SDDOT. Once applied, fertilizers will be worked into the soil to limit the exposure to storm water. Fertilizers will be stored in an enclosed area. The contents of partially used fertilizer bags will be transferred to sealable containers to avoid spills.

Paints

All containers will be tightly sealed and stored when not required for use. The excess will be disposed of according to the manufacturer's instructions and any applicable state and local regulations.

Concrete Trucks

Contractors will provide designated truck washout areas on the site. These areas must be self contained and not connected to any storm water outlet of the site. Upon completion of construction washout areas will be properly stabilized.

> Spill Control Practices (4.2 2 c.(2))

In addition to the previous housekeeping and management practices. the following practices will be followed for spill prevention and cleanup if needed.

- For all hazardous materials stored on site, the manufacturer's recommended methods for spill clean up will be clearly posted. Site personnel will be made aware of the procedures and the locations of the information and cleanup supplies.
- Appropriate cleanup materials and equipment will be maintained by the contractor in the materials storage area on-site. As appropriate, equipment and materials may include items such as brooms, dust pans, mops, rags, gloves, goggles, kitty litter, sand, sawdust, and plastic and metal trash containers specifically for clean up purposes.
- All spills will be cleaned immediately after discovery and the materials disposed of properly.
- The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with a hazardous substance.
- After a spill a report will be prepared describing the spill, what caused it, and the cleanup measures taken. The spill prevention plan will be adjusted to include measures to prevent this type of spill from reoccurring, as well as clean up instructions in the event of reoccurrences.
- The contractor's site superintendent, responsible for day-to-day operations, will be the spill prevention and cleanup coordinator. The contractor is responsible for ensuring that the site superintendent has had appropriate training for hazardous materials handling, spill management, and cleanup.

- site.

- activities.

STATE OF	PROJECT	SHEET	TOTAL SHEETS
DAKOTA	P 6042 (02)	15	65

Spill Response (4.2 2 c.(2))

The primary objective in responding to a spill is to quickly contain the material(s) and prevent or minimize migration into storm water runoff and conveyance systems. If the release has impacted on-site storm water, it is critical to contain the released materials on-site and prevent their release into receiving waters. If a spill of pollutants threatens storm water or surface water at the site, the spill response procedures outlined below must be implemented in a timely manner to prevent the release of pollutants.

The contractor's site superintendent will be notified immediately when a spill or the threat of a spill is observed. The

superintendent will assess the situation and determine the appropriate response.

If spills represent an imminent threat of escaping erosion and sediment controls and entering receiving waters, personnel will be directed to respond immediately to contain the release and notify the superintendent after the situation has been stabilized.

Spill kits containing appropriate materials and equipment for spill response and cleanup will be maintained by the contractor at the

If oil sheen is observed on surface water (e.g. settling ponds. detention ponds, swales), action will be taken immediately to remove the material causing the sheen. The contractor will use appropriate materials to contain and absorb the spill. The source of the oil sheen will also be identified and removed or repaired as necessary to prevent further releases.

If a spill occurs the superintendent or the superintendent's designee will be responsible for completing the spill reporting form and for reporting the spill to SD DENR.

Personnel with primary responsibility for spill response and clean up will receive training by the contractor's site superintendent or designee. The training must include identifying the location of the spill kits and other spill response equipment and the use of spill response materials.

Spill response equipment will be inspected and maintained as necessary to replace any materials used in spill response

Spill Notification

In the event of a spill, the contractor's site superintendent will make the appropriate notification(s), consistent with the following procedures:

- > A release or spill of a regulated substance (includes petroleum and petroleum products) must be reported to DENR immediately if any one of the following conditions exists:
 - The discharge threatens or is in a position to threaten the waters of the state (surface water or ground water).
 - The discharge causes an immediate danger to human health or safety.
 - The discharge exceeds 25 gallons.
 - The discharge causes a sheen on surface water.
 - The discharge of any substance that exceeds the ground water quality standards of ARSD (Administrative Rules of South Dakota) chapter 74:51:01.
 - The discharge of any substance that exceeds the surface water quality standards of ARSD chapter 74:51:01.
 - The discharge of any substance that harms or threatens to harm wildlife or aquatic life.
 - The discharge of crude oil in field activities under SDCL (South Dakota Codified Laws) chapter 45-9 is greater than 1 barrel (42 gallons).

To report a release or spill, call DENR at 605-773-3296 during regular office hours (8 a.m. to 5 p.m. Central time). To report the release after hours, on weekends or holidays, call State Radio Communications at 605-773-3231. Reporting the release to DENR does not meet any obligation for reporting to other state, local, or federal agencies. Therefore, the responsible person must also contact local authorities to determine the local reporting requirements for releases. DENR recommends that spills also be reported to the National Response Center at (800) 424-8802.

Construction Changes (4.4)

When changes are made to the construction project that will require alterations in the temporary erosion controls of the site, the Storm Water Pollution Prevention Plan (SWPPP) will be amended to provide appropriate protection to disturbed areas, all storm water structures, and adjacent waters. The SDDOT Project Engineer will modify the SWPPP plan (DOT 298) and drawings to reflect the needed changes. Copies of changes will be routed per DOT 298. Copies of forms and the SWPPP will be retained in a designated place for review over the course of the project.

♦ CERTIFICATIONS

> Certification of Compliance with Federal, State, and Local Regulations

The Storm Water Pollution Prevention Plan (SWPPP) for this project reflects the requirements of all local municipal jurisdictions for storm water management and sediment and erosion control as established by ordinance, as well as other state and federal requirements for sediment and erosion control plans, permits, notices or documentation as appropriate.

TRAFFIC CONTROL NOTES

GENERAL MAINTENANCE OF TRAFFIC

- 1. Installation of traffic control shall conform to the Manual on Uniform Traffic Control Devices (MUTCD) 2009 Edition unless otherwise modified in the plans.
- 2. The Contractor shall notify the engineer 7 days prior to start of construction and before any substantial traffic control change so that a press release can be issued. The Contractor shall notify the engineer 48 hours in advance of all other traffic control changes.

Installation of traffic control shall not be made before 8:30 AM on the day of the closure.

3. Removing, relocating, salvaging, and resetting of existing traffic control devices, including delineation, shall be the responsibility of the Davison County. The Contractor shall notify Rusty Weinberg Davison County Highways (605-995-8625) 72 hours in advance to schedule signs to be removed.

Additionally, the Contractor shall notify the County 14 calendar days prior to opening to traffic to allow time for installation of permanent signage. The sign installation area must also have final grading completed so the County's one call markings are not disturbed. If the one call markings are disturbed the County will require 7 additional working days to have the one call remarked. If the Contractor fails to notify the County within the specified time period, the Contractor shall be responsible for temporary signage until the permanent signage is installed by the County.

- 4. Storage of vehicles and equipment shall be outside the clear zone and as near as possible to the right-of-way line. Contractor's employees should mobilize at a location off the right-of-way and arrive at the work sites in a minimum number of vehicles necessary to perform the work.
- 5. Indiscriminate driving and parking of vehicles within the right-of-way will not be permitted. Any damage to the vegetation, surfacing, embankment, delineators and existing signs resulting from such indiscriminate use shall be repaired and/or restored by the Contractor, at no expense to the County, and to the satisfaction of the Engineer.
- 6. All breakaway sign supports shall comply with FHWA NCHRP 350 crash-worthy requirements. The Contractor shall provide post installation details at the preconstruction meeting for all steel post breakaway sign support assemblies.
- 7. Installation, maintenance, relocation and removal of Type I and II barricades, cones, vertical panels, drums, barricade warning lights. watchmen, tubular markers and flags shall be included in the lump sum price bid for "Traffic Control Miscellaneous".
- 8. The Contractor or designated traffic control subcontractor shall ensure the adequacy, legibility, and reflectivity of each sign and device. Sign washing shall be considered incidental to Traffic Control and required as directed by the Engineer.
- 9. The Contractor shall provide temporary access routes for residences and businesses located in the construction area unless otherwise noted in the plans. Temporary routes and drives shall be considered

incidental to all items of the project and therefore no separate measurement and payment shall be made.

Miscellaneous".

TRAFFIC DETOUR

A 3-mile detour will be required during construction and shall be installed according to these plans and the traffic diversion shall be constructed according to Section 4.4.A. of the Standard Specifications. Maintenance (occasional blading and retrieval) of the 3 mile detour will be the Contractor's responsibility during construction which will be paid for as the lump sum bid item "Maintenance of Traffic Diversion". Davison County will provide and deliver all new on detour route gravel surfacing as needed. Serious road defects within the detour shall be brought to the Engineer's attention immediately. All traffic accidents on detour and within project area shall be immediately reported to the local authorities or by dialing 911.

For bidding purposes, contractor shall assume one full maintenance operation will be required during construction.

Detour shall be kept in good working condition and free of construction debris. Flashing beacons on traffic control signs should be inspected daily to ensure proper functioning throughout the night.

Installation and removal of the traffic diversion shall meet all requirements as set forth in the South Dakota Surface Water Quality Standards. As the detour route is over existing county and township roads, no impacts to water quality are expected.

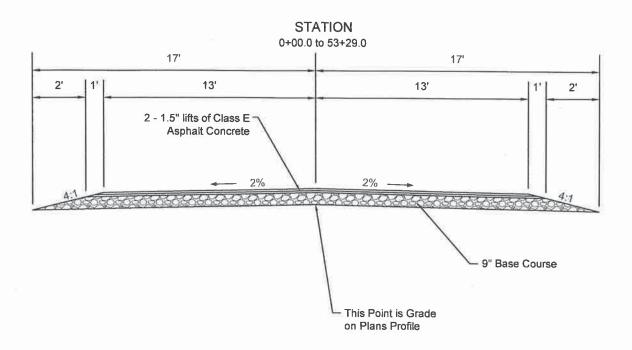

Adjacent landowners will require access into their fields during construction. The contractor shall coordinate with adjacent landowners and shall make reasonable accommodations to provide access into their fields.

STATE OF	PROJECT	SHEET	TOTAL SHEETS
SOUTH DAKOTA	P 6042 (02)	17	65

10. Flagger warning signs shall be installed when using flaggers to direct traffic. Flaggers shall wear appropriate safety clothing and shall use a Stop/Slow paddle. Payment for flagging will be at the contract unit price per hour if a bid item has been included. If no bid item is included, flagging shall be incidental to "Traffic Control.

NOTES:

Detour Route

All Ground Mounted Support signs shall remain in place until all construction is complete.

Posts used for the mounting of construction signs shall yield upon impact to minimize hazards to motorists.

If a two-part post assembly is used, the connection must conform to FHWA breakaway sign support requirements.

Construction signs shall not block the view of existing signs.

Spacing of Fixed Location Signs Shall be as follows:

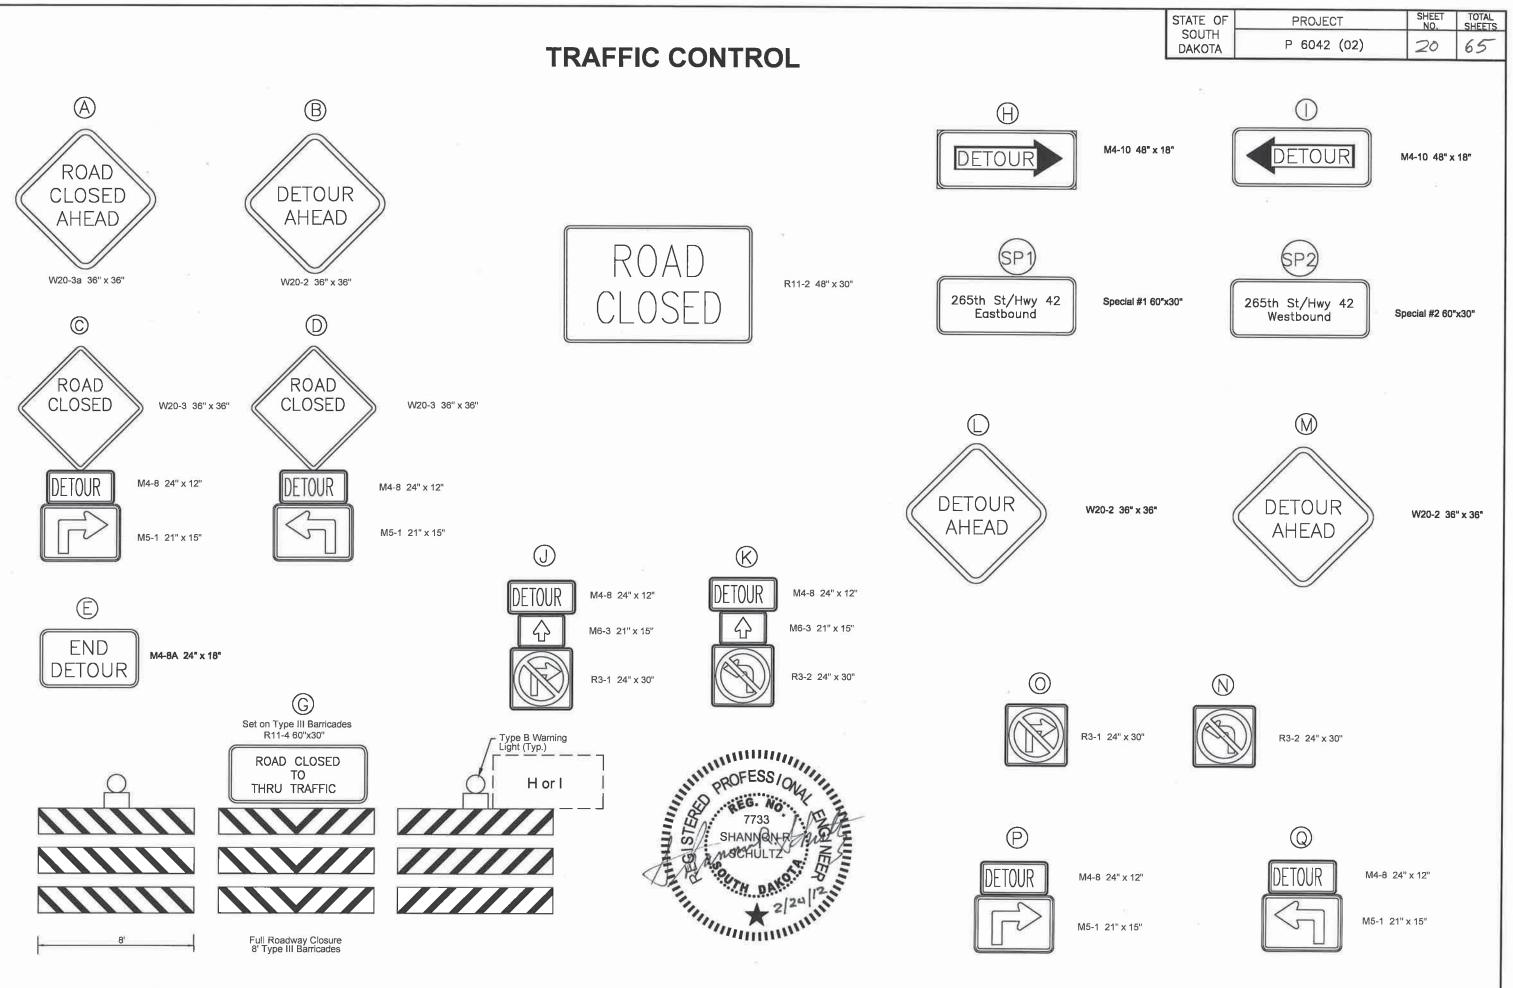

Suggested Adv	ance Warnin	ng Sign Sp	acing	
Road Type	Distance Between Signs**			
	A	В	С	
Urban (low speed*)	30 (100)	30 (100)	30 (100)	
Urban (high speed*)	100 (350)	100 (350)	100 (350)	
Rural	150 (500)	150 (500)	150 (500)	
Expressway/Freeway	300 (1,000)	450 (1,500)	800 (2,640)	

*Speed category to be determined by highway agency.

**Distances are shown in meters (feet). The A dimension is the distance from the transition or point of restriction to the first sign. The B dimension is the distance between the first and second signs. The C dimension is the distance between the second and third signs. (The third sign is the first one in a three—sign series encountered by a driver approaching a temporary traffic control zone).

NOTE: The exact location and spacing of signs shown to be determined in the field by the Contractor.

NOTE: The signs labeled as A and G will be located near the one of the two structures that is being constructed at the time.

GENERAL NOTES:

Safety bars shall be attached to safety ends over 24" in diameter only. Safety ends shall be fabricated from galvanized steel conforming to the requirements of the Standard Specifications.

Safety bars shall be fabricated from steelpipe conforming to the requirements of ASTM A-53 Schedule 40 Specifications.

Slotted holes for safety bar attachment shall be provided for all end sections. Attachment to circular pipes 15" through 24" diameter shall be made with Type #1 straps. All other sizes shall be attached with Type #2 rods and lugs.

When stated in the plans, optional toe plate extension shall be punched and bolted to end section apron lip with % diameter galvanized bolts. Steel for toe plate extension shall be same gauge as end section. Dimensions shall be overall width less 6" by 8" high. Installation shall be performed in accordance with the Standard Specifications.

All work and materials required for fabrication and installation of safety ends shall be incidental to the bid items for the various sizes of safety ends.

SPECIFICATIONS

Use South Dakota Standard Specifications for Roads and Bridges, 2004 Edition and Required Provisions, Supplemental Specifications and/or Special Provisions as included in the Proposal.

GENERAL NOTES

Design shall be in accordance with Section 560 of the South Dakota Standard Specifications with the following criteria:

 Box culvert and box culvert end section design shall conform to the AASHTO LRFD Bridge Design Specifications, 2010 Edition.

2. Design Live Load: HL-93. No construction loading in excess of legal load is anticipated. If construction loading in excess of legal load is anticipated by the Contractor, the Contractor shall submit a proposal including a design analysis for the anticipated construction loading, through the proper channels, to the Office of Bridge Design for approval. Upon approval, the construction load shall not be applied until the depth of fill over the box culvert as required by analysis has been placed. At a minimum, 4 ft. of fill shall be placed over the box culvert prior to applying the construction loads shall be borne by the Contractor.

3. The design of the barrel sections shall be based on a minimum fill height of 2 feet and include all subsequent fill heights up to and including the maximum fill height over the box culvert of 15 feet.

4. Minimum inside corner fillet shall be 6 in.

5. Minimum precast barrel section length shall be 4 ft.

6. Lift holes shall be plugged with an approved non-shrinkable grout.

7. The Fabricator shall imprint on the structure the date of construction as specified and detailed on Standard Plate No. 460.02.

8. Installation of the precast sections shall be in accordance with the final approved shop plans.

DESIGN MIX OF CONCRETE

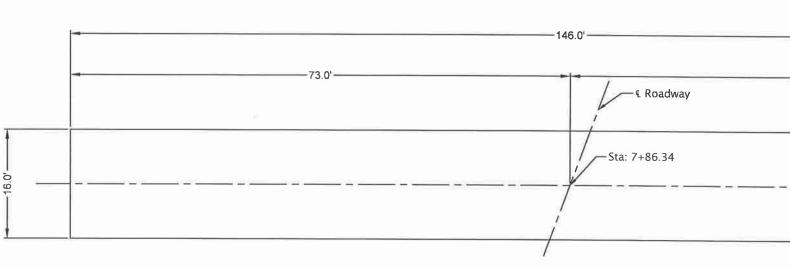

1. Mix shall be as per fabricator's design, however minimum compressive strength shall not be less than 4500 p.s.i. at 28 days.

2. Type II cement is required.

SHOP PLANS

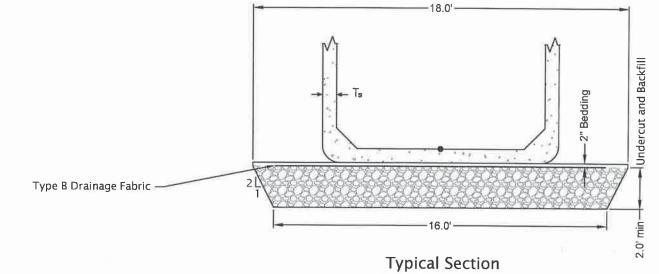

1. The fabricator shall initially submit 3 copies of the shop plans to Civil Design Inc, located at 609 Main Avenue South, Brookings, SD 57006 for review.

- 2. After review by Civil Design Inc, one copy with any revisions noted will be sent to both the Office of Bridge Design and the Fabricator. The Fabricator shall then send seven corrected copies back to Civil Design Inc.
- 3. After review by Civil Design Inc, six copies will be sent back to the Bridge Construction Engineer, South Dakota Department of Transportation, who will review them, arrange for fabrication inspection, authorize fabrication, and distribute the shop drawings.

SPECIFICATIONS

Standard Specifications for Roads and Bridges, 2015 Edition and Required Provisions, Supplemental Specifications, and Special Provisions as included in the Proposal.

The City of Madison Specification for Water Main Construction shall be referred to for the construction of the water main. The requirement that the Contractor shall utilize an independent testing agency to inspect and test the trench subgrade and backfill compaction as stated in Section WM-17.3 Compaction of Backfill shall be waived; the City will contract directly with the South Dakota Department of Transportation for this service. The specification can be found here:

https://citvofmadisonsd.com/media/files/Engineering/Specs/WATER%20SPE CS%20(updated%201-26-2018)%20-1.pdf.

ENVIRONMENTAL COMMITMENTS

The SDDOT is committed to protecting the environment and uses Environmental Commitments as a communication tool for the Engineer and Contractor to ensure that attention is given to avoid, minimize, and/or mitigate an environmental impact. Environmental commitments to various agencies and the public have been made to secure approval of this project. An agency with permitting authority can delay a project if identified environmental impacts have not been adequately addressed. Unless otherwise designated, the Contractor's primary contact regarding matters associated with these commitments will be the Project Engineer. These environmental commitments are not subject to change without prior written approval from the SDDOT Local Government Assistance (LGA) Office at 773-8180.

Additional guidance on SDDOT's Environmental Commitments can be accessed through the Environmental Procedures Manual found at: http://www.sddot.com/resources/Manuals/EnvironProcManual.pdf

For questions regarding change orders in the field that may have an effect on an Environmental Commitment, the Project Engineer will contact the LGA Office at 605-773-8180 to determine whether an environmental analysis and/or resource agency coordination is necessary.

COMMITMENT C: WATER SOURCE

The Contractor will not withdraw water with equipment previously used outside the State of South Dakota or previously used in aquatic invasive species waters within South Dakota without prior approval from the SDDOT LGA Office. Thoroughly wash all construction equipment to prevent and control the introduction and spread of invasive species into the project vicinity.

Action Taken/Required:

The Contractor will obtain the necessary permits from the regulatory agencies such as the South Dakota Department of Environment and Natural Resources (DENR) and the United States Army Corps of Engineers (USACE) prior to water extraction activities.

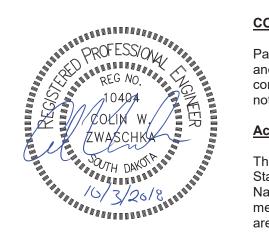

Additional information and mapping of Aquatic Invasive Species in South Dakota can be accessed at: http://sdleastwanted.com/maps/default.aspx.

COMMITMENT D: WATER QUALITY STANDARDS

not impacted.

Action Taken/Required:

The Contractor is advised that the South Dakota Surface Water Quality Standards, administered by the South Dakota Department of Environment and Natural Resources (DENR), apply to this project. Special construction measures will be taken to ensure the above standard(s) of the surface waters are maintained and protected.

STATE OF	PROJECT	SHEET	TOTAL SHEETS
SOUTH DAKOTA	BRF 6304(00)	2	42
	Revised 10/03/2018		

COMMITMENT D1: SURFACE WATER QUALITY

Park Creek is classified as fish and wildlife propagation, recreation, irrigation, and stock watering waters. Because of these beneficial uses, special construction measures may have to be taken to ensure that this water body is

COMMITMENT D2: SURFACE WATER DISCHARGE

The DENR General Permit for Temporary Discharge is required for temporary dewatering and discharges to waters of the state. The effluent limit for total suspended solids will be 90 mg/L 30-day average. The effluent limit applies to discharges to all waters of the state except discharges to waters classified as cold water permanent fish life propagation waters according to the ARSD 74:51:01:45. For discharges to waters, the effluent limit for total suspended solids will be 53 mg/L daily maximum.

The permittee has the option of completing effluent testing or implementing a pollution prevention plan for compliance with this permit. If the permittee develops a pollution prevention plan instead of total suspended solids sampling, the plan must be developed and implemented prior to discontinuing total suspended solids sampling. Refer to section 3.0 of the permit. If any pollutants are suspected of being discharged, a sample must be taken for those parameters listed in section 2.2 of the permit.

Refer to Commitment D1: Surface Water Quality for stream classification.

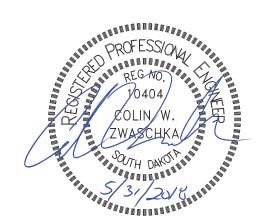

Action Taken/Required:

If construction dewatering is required, the Contractor will obtain the General Permit for Temporary Discharge Activities from the DENR Surface Water Program, 605-773-3351.

http://denr.sd.gov/des/sw/swqformsandpermits.aspx

The Contractor will provide a copy of the approved permit to the Project Engineer prior to proceeding with any dewatering activities. The approved permit must be kept on-site and as part of the project records.

Effluent monitoring, as a result of dewatering activities, will be summarized for each month and recorded on a separate Discharge Monitoring Report (DMR) and submitted to DENR monthly. Additional information can be found at http://denr.sd.gov/des/sw/WhatisaDMR.aspx

COMMITMENT E: STORM WATER

Construction activities constitute 1 acre or more of earth disturbance and/or work in a waterway.

Action Taken/Required:

The DENR General Permit for Storm Water Discharges Associated with Construction Activities is required for construction activity disturbing one or more acres of earth and work in a waterway. The SDDOT is the owner of this permit and will submit the NOI to DENR 15 days prior to project start in order to obtain coverage under the General Permit. Work can begin once the DENR letter of approval is received.

The Contractor must adhere to the "Special Provision Regarding Storm Water Discharges to Waters of the State."

The Contractor will complete the DENR Contractor Certification Form prior to the pre-construction meeting. The form certifies under penalty of law that the Contractor understands and will comply with the terms and conditions of the permit for this project. Work may not begin on this project until this form is signed and submitted to DENR.

The form can be found at: http://denr.sd.gov/des/sw/eforms/E2110LDV1-ContractorCertification.pdf

The Contractor is advised that permit coverage may also be required for offsite activities, such as borrow and staging areas, which are the responsibility of the Contractor.

Storm Water Pollution Prevention Plan

The Storm Water Pollution Prevention Plan (SWPPP) will be developed prior to the submittal of the NOI and will be implemented for all construction activities for compliance with the permit. The SWPPP must be kept on-site and updated as site conditions change. Erosion control measures and best management practices will be implemented in accordance with the SWPPP.

The Storm Water, Erosion, and Sediment Control Inspection Report Form DOT 298, will be used for site inspections and to document changes to the SWPPP. A copy of the completed inspection form will be filed with the SWPPP documents and retained for a minimum of three years.

The inspection will include disturbed areas of the construction site that have not been finally stabilized, areas used for storage materials, structural control measures, and locations where vehicles enter or exit the site. These areas will be inspected for evidence of, or the potential for, pollutants entering the drainage system. Erosion and sediment control measures identified in the SWPPP will be observed to ensure that they are operating correctly and sediment is not tracked off of the site.

Information on storm water permits and SWPPPs are available on the following websites:

SDDOT: www.sddot.com/business/environmental/stormwater/Default.aspx

DENR: http://denr.sd.gov/des/sw/stormwater.aspx

EPA: https://www.epa.gov/npdes

COMMITMENT H: WASTE DISPOSAL SITE

The Contractor will furnish a site(s) for the disposal of construction and/or demolition debris generated by this project.

Action Taken/Required:

Construction and/or demolition debris may not be disposed of within the Public ROW.

The waste disposal site(s) will be managed and reclaimed in accordance with the following from the General Permit for Construction/Demolition Debris Disposal Under the South Dakota Waste Management Program issued by the Department of Environment and Natural Resources.

The waste disposal site(s) will not be located in a wetland, within 200 feet of surface water, or in an area that adversely affects wildlife, recreation, aesthetic value of an area, or any threatened or endangered species, as approved by the Project Engineer.

If the waste disposal site(s) is located such that it is within view of any ROW, the following additional requirements will apply:

1. Construction and/or demolition debris consisting of concrete, asphalt concrete, or other similar materials will be buried in a trench completely separate from wood debris. The final cover over the construction and/or demolition debris will consist of a minimum of 1 foot of soil capable of supporting vegetation. Waste disposal sites provided outside of the Public ROW will be seeded in accordance with Natural Resources Conservation Service recommendations. The seeding recommendations may be obtained through the appropriate County NRCS Office. The Contractor will control the access to waste disposal sites not within the Public ROW with fences, gates, and placement of a sign or signs at the entrance to the site stating "No Dumping Allowed".

2. Concrete and asphalt concrete debris may be stockpiled within view of the ROW for a period of time not to exceed the duration of the project. Prior to project completion, the waste shall be removed from view of the ROW or buried and the waste disposal site reclaimed as noted above.

The above requirements will not apply to waste disposal sites that are covered by an individual solid waste permit as specified in SDCL 34A-6-58, SDCL 34A-6-1.13, and ARSD 74:27:10:06.

Failure to comply with the requirements stated above may result in civil penalties in accordance with South Dakota Solid Waste Law, SDCL 34A-6-1.31.

All costs associated with furnishing waste disposal site(s), disposing of waste, maintaining control of access (fence, gates, and signs), and reclamation of the waste disposal site(s) will be incidental to the various contract items.

	STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
		BRF 6304(00)	3	42

COMMITMENT I: HISTORICAL PRESERVATION OFFICE CLEARANCES

The Corps of Engineers has obtained concurrence with the State Historical Preservation Office (SHPO or THPO) for all work included within the project limits and all department designated sources and designated option material sources, stockpile sites, storage areas, and waste sites provided within the plans.

Action Taken/Required:

All earth disturbing activities not designated within the plans require a cultural resource review prior to scheduling the pre-construction meeting. This work includes, but is not limited to: Contractor furnished material sources, material processing sites, stockpile sites, storage areas, plant sites, and waste areas.

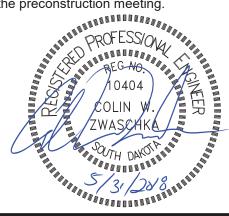

The Contractor will arrange and pay for a record search and when necessary, a cultural resource survey. The Contractor has the option to contact the state Archaeological Research Center (ARC) at 605-394-1936 or another qualified archaeologist, to obtain either a records search or a cultural resources survey. A record search might be sufficient for review if the site was previously surveyed; however, a cultural resources survey may need to be conducted by a qualified archaeologist.

The Contractor will provide ARC with the following: a topographical map or aerial view of which the site is clearly outlined, site dimensions, project number, and PCN. If applicable, provide evidence that the site has been previously disturbed by farming, mining, or construction activities with a landowner statement that artifacts have not been found on the site.

The Contractor will submit the cultural resources survey report to SDDOT Environmental Office, 700 East Broadway Avenue, Pierre, SD 57501-2586. SDDOT will submit the information to the appropriate SHPO/THPO. Allow 30 Days from the date this information is submitted to the Environmental Engineer for SHPO/THPO review.

In the event of an inadvertent discovery of human remains, funerary objects, or if evidence of cultural resources is identified during project construction activities, then such activities will immediately cease and the Project Engineer will be immediately notified. The Project Engineer will contact the SDDOT LGA Environmental Office to determine an appropriate course of action.

SHPO review does not relieve the Contractor of the responsibility for obtaining any additional permits and clearances for Contractor furnished material sources, material processing sites, stockpile sites, storage areas, plant sites, and waste areas that affect wetlands, threatened and endangered species, or waterways. The Contractor will not utilize a site known or suspected of having contaminated soil or water. The Contractor will provide the required permits and clearances to the Project Engineer at the preconstruction meeting.

COMMITMENT J: CONSTRUCTION PRACTICES FOR TEMPORARY WORKS IN WATERWAYS OF THE U.S.

The Contractor is advised that special construction measures must be taken to ensure that the waterways of the U.S. are not impacted.

Action Taken/Required:

Excavation will not occur below the ordinary high water elevation in waterways outside of caissons, cribs, cofferdams, steel piling, or sheeting. The natural streambed will not be disturbed unless specified by the plans and under the observation of the Project Engineer. Refer to the Table of U.S. Waterways to Protect for ordinary high water elevations. Any structure work over or within the waterway shall be constructed according to Section 7.21 C of the Specifications.

All dredged or excavated materials will be placed at a site above the ordinary high water elevation in a confined area (not classified as a wetland) that is a minimum of 50 feet away from concentrated flows of storm water, drainage courses, and inlets to prevent return of such material to the waterway.

The construction of temporary work platforms, crossings, or berms below the ordinary high water elevation will be allowed if all material placed below the ordinary high water elevation consists of Class B or larger riprap.

All temporary caissons, cribs, cofferdams, steel piling, sheeting, work platforms, crossings, and berms will be removed with minimal disturbance to the streambed. Proper construction practices will be used to minimize increases in suspended solids and turbidity in the waterway.

Bridge berms, wing dams, traffic diversions, channel reconstruction, stream diversions, grading, etc. will be constructed in close conformity with the plans to ensure that the hydraulic capacity of the waterway is not changed.

Temporary waterway crossings required for the Contractor's construction operations will be constructed with an adequate drainage structure size and minimum fill height to reduce the potential for upstream flooding. The Contractor will be responsible for sizing the temporary drainage structure for these crossings.

Table of U.S. Waterways to Protect

Station	Waterway	Ordinary High Water Elevation
9+98.93	Park Creek	1663.30

Stream channel excavation within "Waters of the US" is subject to USACE regulatory jurisdiction. Stream channel excavation cannot exceed the permitted quantities and/or surface area. The 404 Permit is included in the Special Provisions.

The Contractor will take all precautions necessary to prevent any incidental discharges associated with the excavation and hauling of material from the stream channel. This pertains to any excavation operations such as. foundation, pier, or abutment excavation, channel cleanout, excavation for riprap protection, and removal of any temporary fill associated with construction activities.

COMMITMENT N: SECTION 404 PERMIT

Action Taken/Required:

The Contractor will comply with all requirements contained in the Section 404 Permit.

The Contractor will also be responsible for obtaining a Section 404 Permit for any dredge, excavation, or fill activities associated with material sources, storage areas, waste sites, and Contractor work sites outside the plan work limits that affect wetlands, floodplains, or waters of the United States.

CITY RESPONSIBILITIES

The City will provide, install, and/or coordinate as necessary the following items without federal participation:

Prior to construction of the project, existing traffic signs within project limits will be removed, relocated, covered, and/or salvaged as necessary, by the City of Madison Maintenance Forces. The Contractor shall notify the City a minimum of 48 hours prior to commencing construction.

Contact information for City of Madison: City Engineer – Chad Comes (605) 256-7514

SEQUENCE OF OPERATIONS

- Remove existing bridge structures. 3.
- 5. Install utilities and storm sewer. 6. Grade roadway.
- 7.
- 8. Install surfacing.
- 10. Place topsoil.
- 11. Reseed areas disturbed by construction activities.
- 12. Complete remaining project items.

Engineer.

	STATE OF SOUTH DAKOTA	PROJECT	SHEET	TOTAL SHEETS
		BRF 6304(00)	4	42

The SDDOT has obtained a Section 404 Permit from the USACE for the permanent actions associated with this project.

1. Obtain right-of-way and temporary and permanent easements.

2. Coordinate the removal and reinstallation of light pole located at Sta. 9+71.50 – 21'LT.

3. Furnish and install new permanent signing.

4. Remove silt fence when vegetation has been established in permanently seeded areas.

1. Install temporary traffic control signing.

2. Install sediment control at structure and inlets.

- 4. Remove and store topsoil.

 - Construct new structure.
- 9. Adjust sediment control at structure and inlets.
- 13. Remove temporary traffic control signing.

Any changes to the Sequence of Operations require approval from the

UTILITIES

The Contractor shall be aware that the existing utilities shown in the plans were surveyed prior to the design of this project and might have been relocated or replaced by a new utility facility prior to construction of this project, might be relocated or replaced by a new utility facility during the construction of this project, or might not require adjustment and may remain in its current location. The Contractor shall contact each utility owner and confirm the status of all existing and new utility facilities.

SD One Call shall be notified at 1-800-781-7474 a minimum of 48 hours prior to commencing construction. The Contractor shall likewise contact the City of Madison prior to commencing construction. Utilities from the following utility owners are known to exist at this site:

East River Electric Power Cooperative 211 South Harth Avenue Madison, SD 57042 Phone: (605) 256-8058

TRAFFIC CONTROL

The Contractor shall follow the plans provided, unless an alternate plan is submitted by the Contractor and approved by the Engineer prior to any work. The submitted plan shall comply with MUTCD requirements.

SHEETING FOR TRAFFIC CONTROL SIGNS

All fluorescent orange background material on traffic control signs, all temporary delineators, and all temporary STOP (R1-1), YIELD (R1-2), DO NOT ENTER (R5-1), and WRONG WAY (R5-1a) signs shall conform to the requirements of ASTM D4956 Type IX or XI. All other traffic control signs and background colors shall conform to the requirements of ASTM D4956 Type IV.

GENERAL MAINTENANCE OF TRAFFIC

All costs, labor and materials to furnish, install and remove the traffic control for the traffic control items discussed below shall be included in the contract lump sum price for "Traffic Control, Miscellaneous."

- Traffic shall be maintained in accordance with Section 4.5 of the Specifications. Traffic control shall be installed in accordance with the Manual of Uniform Traffic Control Devices (MUTCD) and standard plates located herein.
- The Contractor shall coordinate with the City of Madison to have all permanent signs placed prior to opening the roadway to traffic.

Work activities during non-daylight hours are subject to prior approval from the Engineer.

The traffic control signs designated on the standard plates shall be maintained by the Contractor in a satisfactory manner. No sign shall be improperly displayed or left in place inappropriately.

The bottom of signs on portable or temporary supports shall not be less than seven (7) feet above the pavement in urban areas and one foot above the pavement in rural areas. Portable sign supports may be used as long as the duration is less than three (3) days. If the duration is more than three (3) days, the signs shall be on fixed location, breakaway supports.

TEMPORARY PEDESTRIAN ACCESS ROUTE

A Temporary Pedestrian Access Route (TPAR) shall be provided when crosswalks, sidewalks, or other pedestrian facilities are blocked, closed, or relocated. A TPAR may consist of a combination of existing and/or temporary pedestrian facilities. The TPAR shall be kept free of any obstructions and hazards, such as holes, debris, mud, snow, construction equipment, traffic control signing, stored materials, etc.

The Contractor shall notify the Engineer at least 72 hours prior to start of any construction operation that will necessitate a change in pedestrian access. Pedestrian traffic signal displays controlling a crosswalk that is closed shall be covered or removed.

TEMPORARY CURB RAMP

Temporary Curb Ramps should be firm, stable, and have a non-slip surface. They shall not warp or buckle and should be made of materials strong enough to support a weight of 800 pounds. Temporary Curb Ramps shall also be color contrasting and contain marked edges so they are noticeable by pedestrians who have visual impairments. Lateral joints or gaps between surfaces shall be a maximum of 0.5 inches in width. Temporary Curb Ramps shall include detectable warning panels.

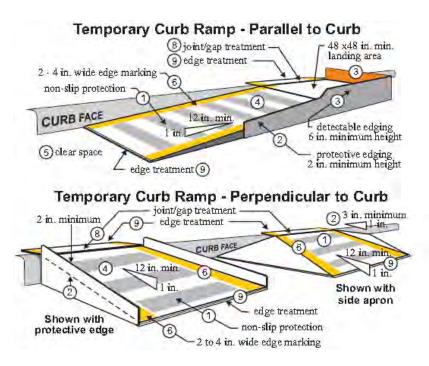

Temporary Curb Ramps shall be the full width of the temporary pedestrian access route, with a recommended width of 60" and a minimum width of 48". Temporary Curb Ramps shall have a maximum slope of 1:12 and have free draining surfaces with a maximum cross slope of 2 percent. Handrails on Temporary Curb Ramps are not required unless the curb ramp has a rise exceeding 6" and a length exceeding 72".

All costs shall be Curb Ramp".

	STATE OF	PROJECT	SHEET	TOTAL SHEETS
	SOUTH DAKOTA	BRF 6304(00)	5	42

All costs shall be incidental to the contract unit price per each for "Temporary

Curb ramps shall be 48 inch minimum width with a firm, stable, and 1. non-slip surface.

Protective edging with a 2 inch minimum height shall be installed 2 when the curb ramp or landing platform has a vertical drop of 6 inches or greater or has a side apron slope steeper than 1:33 (33%). Protective edging should be considered when curb ramps or landing platforms have a vertical drop of 3 inches or more.

Detectable edging with 6 inches minimum height and contrasting color 3. shall be installed on all curb ramp landings where the walkway changes direction (turns).

Curb ramps and landings should have a 1:50 (2%) maximum cross 4. slope.

A minimum clear space of 48 inch x 48 inch minimum shall be 5. provided above and below the curb ramp, with a 60 inch x 60 inch clear space preferred.

6. 6. The curb ramp walkway edge shall be marked with a contrasting color 2 to 4 inch wide marking. The marking is optional where color contrasting edging is used.

Water flow in the gutter system shall have minimal restriction. 7.

8. Lateral joints or gaps between surfaces shall be less than 0.5 inches in width.

9. Changes between surface heights should not exceed 0.5 inches. Lateral edges should be vertical up to 0.25 inches in height, and beveled at 1:2 between 0.25 inches and 0.5 inches in height.

LONGITUDINAL PEDESTRIAN BARRICADE

Longitudinal Pedestrian Barricades should not be used to provide positive protection for pedestrians.

Barricade rail supports may not project into pedestrian routes more than 4 inches from the face of the barricade. To prevent any tripping hazard to pedestrians, ballast shall be located behind or internal to the device.

When Longitudinal Pedestrian Barricades are combined in a series, the maximum gap between devices that do not interlock shall be one inch. Joints between devices that do interlock shall be closed and flush to prevent canes or small wheels from being trapped and to facilitate safe hand trailing. When used as a sidewalk closure mechanism, Longitudinal Pedestrian Barricade must run the entire width of the sidewalk. Longitudinal Pedestrian Barricade should provide a color contrasting pattern. Black should not be used to color any base on a device. The devices should comply with the general color and stripe pattern requirements of Section 6F.68 of the MUTCD.

Longitudinal Pedestrian Barricade shall have continuous bottom and top surfaces. A gap height or opening from the walkway surface up to a maximum of 2 inches is allowed for drainage purposes. The top edge of the bottom portion shall be a minimum of 8 inches above the walkway. The top of the top portion shall be between 34 and 38 inches above the walkway. The top surface shall be smooth to allow safe hand trailing. Both upper and lower surfaces shall share a common vertical plane.

All costs shall be incidental to the contract unit price per foot for "Longitudinal Pedestrian Barricade".

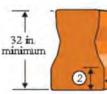

LONGITUDINAL PEDESTRIAN BARRIER

When exposed to vehicular traffic, Longitudinal Pedestrian Barrier shall be crashworthy, and the bottom and top surfaces of the traffic side of devices shall have retroreflective sheeting or delineation for improved nighttime visibility.

When Longitudinal Pedestrian Barriers are combined in a series, the maximum gap between devices that do not interlock shall be one inch. Joints between devices that do interlock should be closed and flush to prevent canes or small wheels from being trapped and to facilitate safe hand trailing. Channelizing devices should provide a color contrasting pattern. Black should not be used to color any base on a device. The devices should comply with the general color and stripe pattern requirements of Chapter 6F of the MUTCD.

Longitudinal Pedestrian Barriers shall have continuous bottom and top surfaces. The lower edge of the bottom portion shall be a maximum of 2 inches above the walkway. The top edge of the bottom portion shall be a minimum of 8 inches above the walkway. The top of the top portion shall be a minimum of 32 inches above the walkway. The top surface shall be smooth to allow safe hand trailing.

All costs shall be incidental to the contract unit price per foot for "Longitudinal Pedestrian Barrier".

Longitudinal Pedestrian Barrier

1. Barricade rail supports may not extend into the pedestrian walkway more than 4 inches from the face of the barricade.

the walkway.

3. Devices shall not block water drainage from the walkway. A gap height or opening from the walkway surface up to a maximum of 2 inches in height is allowed for drainage purposes.

5. Longitudinal Pedestrian Barrier used to provide positive protection from traffic to pedestrians should be crashworthy.

6. When either device is combined in a series, the maximum gap between devices that do not interlock shall be 1 inch. Joints between devices that do interlock should be closed and flush to prevent canes or small wheels from being trapped and to facilitate safe hand trailing.

4. The top edge of the Longitudinal Pedestrian Barricade is to be used as a guiderail to provide visual and tactile guidance to pedestrians along a designated route. The top surface should have a minimum width of 0.5 inches to allow the hand to feel the surface. The surface should be smooth and free of any sharp or abrasive elements to allow safe hand trailing.

CLEARING

Before clearing activities begin, the Contractor shall contact the Engineer to determine the limits of clearing for the project. If the trees or shrubs that are supposed to remain within the limits of work are damaged or destroyed by the Contractor, the Contractor shall replace them with the same size and type at the Contractor's expense.

SURFACING THICKNESS DIMENSIONS

Material will be placed evenly, at the rates shown in the plans, even though the thickness may vary from that shown on the typical section.

At those locations where material must be placed to achieve required elevations, quantities may be varied to achieve the required elevations, as approved by the Engineer.

GRADING OPERATIONS

Water for Embankment is estimated at the rate of 10 gallons of water per cubic yard of Embankment minus Waste. The estimated quantity of Water for Embankment is 8.6 MGal. No separate payment will be made for the Water for Embankment and all costs associated shall be incidental to the contract unit price per cubic yard for "Unclassified Excavation."

The estimated cubic yards of excavation and/or embankment required for constructing the bridge berm(s) and shape channel(s) is included in the earthwork balance notes on the profile sheets.

The plan quantity of Unclassified Excavation will be the basis for payment for this item.

TABLE OF EXCAVATION QUANTITIES

	TOTAL =	1707	CuYd

SHRINKAGE FACTOR

Embankment plus 30 percent.

CONTRACTOR FURNISHED BORROW EXCAVATION

The Contractor shall provide a suitable site for Contractor furnished borrow excavation material. The Contractor is responsible for obtaining all required permits and clearances for the borrow site. The borrow material shall be approved by the Engineer. The plans quantity for "Contractor Furnished Borrow Excavation" as shown in the Estimate of Quantities will be the basis of payment for this item.

Restoration of the Contractor furnished borrow excavation site shall be the responsibility of the Contractor.

PLACING TOPSOIL

Existing vegetation shall be salvaged, incorporated and placed with the topsoil as far as practical.

The thickness will be approximately 6 inches.

The estimated amount of salvaged topsoil required to cover the disturbed areas to the specified depth is 129 cubic yards.

Watertight joints are required where reinforced concrete pipes, drop inlets. manholes, or junction boxes cross water mains and are separated a distance of 18 inches or less, above or below, the water main.

If watertight joints are required then the watertight joints shall extend for a distance of 10 feet beyond the water main. This measurement shall be from the sealed concrete joint to the outer most surface of the water main.

Watertight joint seals shall conform to the following requirements:

1. <u>Reinforced Concrete Pipe (Circular)</u>: Gasketed pipe shall conform to the requirements of ASTM C443 and the gasket shall be in conformance with Section 990 of the Specifications. Non-gasketed concrete pipe shall be sealed with a mastic joint seal conforming to the requirements of ASTM C990 and encased with a minimum 2' wide by 6" thick M6 concrete collar reinforced with 6x6 W2.9 x W2.9 wire mesh.

2. <u>Reinforced Concrete Pipe (Arch)</u>: Gasketed pipe shall conform to the requirements of ASTM C443 and the gasket shall be in conformance with Section 990 of the Specifications. Non-gasketed concrete pipe joints shall be sealed with a hydrophilic flexible water stop seal and wrapped with a 1-foot wide strip of fabric above the cradle. The fabric shall conform to the requirements of Section 831 of the Specifications for Type A Drainage Fabric. The hydrophilic flexible water stop shall be from the

3. Drop Inlets, Manholes, and Junction Boxes: Joints shall be sealed with one of the following methods:

> A. A flexible strip seal placed in the joints conforming to the requirements of ASTM C990 and the perimeter encased with a minimum 2' wide by 6" thick M6 concrete collar reinforced with 6x6 W2.9 x W2.9 wire mesh.

A hydrophilic flexible water stop seal placed in the joints and a 1-foot wide strip of fabric wrapped around the perimeter of the pipe. The fabric shall conform to the requirements of Section 831 of the Specifications for Type A Drainage Fabric. The hydrophilic flexible water stop shall be from the list below.

A self-adhesive external joint seal wrap. The seal wrap shall be from the list below.

EROSION CONTROL (Cont.)

Water for Vegetation

Water for vegetation consists of applying water to seeded areas to enhance germination and/or root growth. When watering, use the following guidelines:

Immediately after seeding:

- Keep the topsoil moist but not excessively wet until the seed has germinated.
- Water a minimum of 3 days a week for 2 weeks preferably watering 2 or 3 times a day in small quantities.
- Use fine spray and low pressure to avoid topsoil wash and to prevent uncovering buried seeds.

After emergence:

- Topsoil shall be kept thoroughly moistened by sprinkling, as necessary, for 6 weeks. After the 6-week period, an inspection shall be made to determine if grass is established enough to suspend watering. Continue watering until grass has been thoroughly established.
- Never apply water at a rate faster than the topsoil can absorb.
- Water during early morning hours or early evening hours.
- Do not water when rain is forecasted for the area.
- If rainfall occurs, suspend watering according to rainfall amount.

STREET SWEEPING

Vehicle tracking of sediment from the construction site shall be minimized. Street sweeping shall be used if erosion and sediment control best management practices are not adequate to prevent sediment from being tracked onto the street.

The Contractor shall use a pickup broom having integral self-contained storage to clean the roadway. The pickup broom used shall be a minimum of 6 feet wide and have working gutter brooms.

At a minimum, sweeping will be required prior to opening any segment or roadway to traffic.

All costs for cleaning the roadway with a pickup broom shall be incidental to the contract unit price per hour for "Sweeping".

LOW FLOW SILT FENCE

The low flow silt fence fabric provided shall be from the approved product list. The approved product list for low flow silt fence may be viewed at the following internet site:

http://sddot.com/business/certification/products/Default.aspx

Low flow silt fence shall be placed as shown on the plan sheets and at locations that will minimize siltation of adjacent streams, lakes, dams, or drainage areas as determined by the Engineer during construction. Refer to Standard Plate 734.04 for details.

RESTRAINED JOINT WATER MAIN CONSTRUCTION

The Contractor shall refer to the Special Provisions to reference the City of Madison Specifications for Water Main Construction.

All watermains shall have a minimum of 6.0 feet of cover based on the final pavement grade above the watermain unless shown otherwise on the plans. The final grade above the watermain shall be based on the profile sheets shown in the plans.

shall be responsible for completing all connections on the new ne existing water main. Cost of the work, including furnishing tainer glands, shall be incidental to the contract unit price per d for the connection.

shall be careful not to damage water valve boxes. Any boxes, including misalignment of boxes, due to carelessness shall be repaired by the contractor at no cost to the owner.

sting valve boxes designated to remain shall be adjusted to new surfacing. Adjustment of valve boxes shall be considered ject costs.

termain appurtenances shall remain the property of the City of

ding material shall be used at locations where the proposed blaced beneath street pavement and as directed by the t for water main bedding shall incidental to the contract unit r "6" PVC Restrained Joint Water Main."

e estimate of quantities is 20.6 ton of Trench Stabilization material shall be used when it is necessary to stabilize the ench and as directed by the Engineer.

using pipe spacers and end seals shall be incidental to the ice per foot for "12" PVC Encasement Pipe". No separate *i*ll be made for these appurtenances.

RESTRAINED JOINT WATER MAIN SHOP DRAWINGS

The Contractor shall submit the following shop drawings for the following items that pertain to water main construction.

- Encasement Pipe and AppurtenancesRestrained Joint Water Main Pipe
- Fittings
- Valve
- Valve Box
- Bedding Material Gradation
- Trench Stabilization Material Gradation
- Tracer Wire

UTILITY TRENCH COMPACTION TESTING

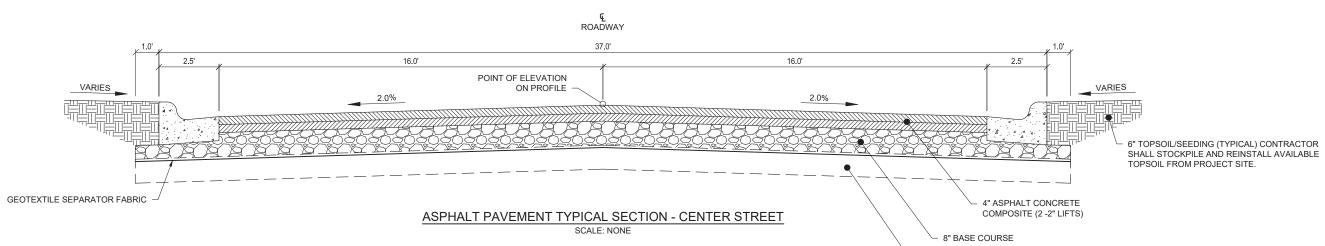

The City of Madison will contract with the South Dakota Department of Transportation to inspect and test utility trench backfill as stated in the City of Madison Specification for Water Main Construction. Test results shall be provided to the City of Madison Engineering Department promptly.

 - Temporary Water Barrier
 - Temporary Water Crossing
 - Other:

\geq Wetland Avoidance

Will construction and/or erosion and sediment controls impinge on regulated wetlands? Yes \Box No \boxtimes If yes, the structural and erosion and sediment controls have been included in the total project wetland impacts and have been included in the 404 permit process with the USACE.

 \geq Storm Water Management (4.2 2.b., (1) and (2))

Storm water management will be handled by temporary controls outlined in "EROSION AND SEDIMENT CONTROLS" above, and any permanent controls needed to meet permanent storm water management needs in the post construction period. Permanent controls will be shown on the plans and noted as permanent.

Other Storm Water Controls (4.2 2.c., (1) and (2)) \geq

Waste Disposal

All liquid waste materials will be collected and stored in sealed metal containers approved by the project engineer. All trash and construction debris from the site will be deposited in the approved containers. Containers will be serviced as necessary, and the trash will be hauled to an approved disposal site or licensed landfill. All onsite personnel will be instructed in the proper procedures for waste disposal, and notices stating proper practices will be posted in the field office. The general Contractor's representative responsible for the conduct of work on the site will be responsible for seeing waste disposal procedures are followed.

Hazardous Waste

All hazardous waste materials will be disposed of in a manner specified by local or state regulations or by the manufacturer. Site personnel will be instructed in these practices, and the individual designated as the Contractor's on-site representative will be responsible for seeing that these practices are followed.

Sanitary Waste

Portable sanitary facilities will be provided on all construction sites. Sanitary waste will be collected from the portable units in a timely manner by a licensed waste management Contractor or as required by any local regulations.

MAINTENANCE AND INSPECTION (4.2 3. and 4.2 4.)

- report.
- the silt fence.

- DOT 298.

NON-STORM WATER DISCHARGES (3.0)

The following non-storm water discharges are anticipated during the course of this project (check all that apply).

> Maintenance and Inspection Practices

 Inspections will be conducted at least one time per week and after a storm event of 0.50 inches or greater.

All controls will be maintained in good working order. Necessary repairs will be initiated within 24 hours of the site inspection

Silt fence will be inspected for depth of sediment and for tears in order to ensure the fabric is securely attached to the posts and that the posts are well anchored. Sediment buildup will be removed from the silt fence when it reaches $\frac{1}{3}$ of the height of

Sediment basins and traps will be checked. Sediment will be removed when depth reaches approximately 50 percent of the structure's capacity, and at the conclusion of the construction. Check dams will be inspected for stability. Sediment will be removed when depth reaches $\frac{1}{2}$ the height of the dam.

All seeded areas will be checked for bare spots, washouts, and vigorous growth free of significant weed infestations.

Inspection and maintenance reports will be prepared on form DOT 298 for each site inspection, this form will also be used to document changes to the SWPPP. A copy of the completed inspection form will be filed with the SWPPP documents. The SDDOT Project Engineer and Contractor's Erosion Control Supervisor are responsible for inspections. Maintenance, repair activities are the responsibility of the Contractor. The SDDOT Project Engineer will complete the inspection and maintenance reports and distribute copies per the distribution instructions on

Discharges from water line flushing.

> Pavement wash-water, where no spills or leaks of toxic or hazardous materials have occurred.

Uncontaminated ground water associated with dewatering

MATERIALS INVENTORY (4.2. 2.c.(2))

The following materials or substances are expected to be present on the site during the construction period. These materials will be handled as noted under the headings "EROSION AND SEDIMENT CONTROLS" and "SPILL PREVENTION" (check all that apply). Concrete and Portland Cement

Detergents

Bituminous Materials Petroleum Based Products Cleaning Solvents

Chemical Fertilizers

SPILL PREVENTION (4.2 2.c.(2))

> Material Management

- Housekeeping
 - Only needed products will be stored on-site by the Contractor.
 - Except for bulk materials the contractor will store all materials under cover and in appropriate containers.
 - Products must be stored in original containers and labeled.
 - Material mixing will be conducted in accordance with the manufacturer's recommendations.
 - When possible, all products will be completely used before • properly disposing of the container off-site.
 - The manufacturer's directions for disposal of materials and containers will be followed.
 - The Contractor's site superintendent will inspect materials storage areas regularly to ensure proper use and disposal.
 - Dust generated will be controlled in an environmentally safe manner.
 - Vegetation areas not essential to the construction project will be preserved and maintained as noted on the plans.
- Hazardous Materials
 - Products will be kept in original containers unless the container is not resealable.
 - Original labels and material safety data sheets will be retained in a safe place to relay important product information.
 - If surplus product must be disposed of, manufacturer's label • directions for disposal will be followed.
 - Maintenance and repair of all equipment and vehicles involving oil changes, hydraulic system drain down, degreasing operations, fuel tank drain down and removal, and other activities which may result in the accidental release of contaminants will be conducted on an impervious surface and under cover during wet weather to prevent the release of contaminants onto the ground.
 - Wheel wash water will be collected and allowed to settle out suspended solids prior to discharge. Wheel wash water will not be discharged directly into any storm water system or storm water treatment system.
 - Potential pH-modifying materials such as: bulk cement, cement kiln dust, fly ash, new concrete washings, concrete pumping, residuals from concrete saw cutting (either wet or dry), and mixer washout waters will be collected on site and managed to prevent contamination of storm water runoff.

Product Specific Practices (6.8)

Petroleum Products

All on-site vehicles will be monitored for leaks and receive regular preventive maintenance to reduce the chance of leakage. Petroleum products will be stored in tightly sealed containers which are clearly labeled.

Fer<u>tilizers</u>

Fertilizers will be applied only in the amounts specified by the SDDOT. Once applied, fertilizers will be worked into the soil to limit the exposure to storm water. Fertilizers will be stored in an enclosed area. The contents of partially used fertilizer bags will be transferred to sealable containers to avoid spills.

Paints

All containers will be tightly sealed and stored when not required for use. The excess will be disposed of according to the

manufacturer's instructions and any applicable state and local regulations.

Concrete Trucks

Contractors will provide designated truck washout facilities on the site. These areas must be self-contained and not connected to any storm water outlet of the site. Upon completion of construction, the area at the washout facility will be properly stabilized.

> Spill Control Practices (4.2 2 c.(2))

In addition to the previous housekeeping and management practices, the following practices will be followed for spill prevention and cleanup if needed.

- For all hazardous materials stored on site, the manufacturer's recommended methods for spill cleanup will be clearly posted. Site personnel will be made aware of the procedures and the locations of the information and cleanup supplies.
- Appropriate cleanup materials and equipment will be maintained by the Contractor in the materials storage area on-site. As appropriate, equipment and materials may include items such as brooms, dust pans, mops, rags, gloves, goggles, kitty litter, sand, sawdust, and plastic and metal trash containers specifically for cleanup purposes.
- All spills will be cleaned immediately after discovery and the materials disposed of properly.
- The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with a hazardous substance.
- After a spill a report will be prepared describing the spill, what caused it, and the cleanup measures taken. The spill prevention plan will be adjusted to include measures to prevent this type of spill from reoccurring, as well as clean up instructions in the event of reoccurrences.
- The Contractor's site superintendent, responsible for day-to-day operations, will be the spill prevention and cleanup coordinator. The Contractor is responsible for ensuring that the site superintendent has had appropriate training for hazardous materials handling, spill management, and cleanup.

> Spill Response (4.2 2 c.(2))

The primary objective in responding to a spill is to quickly contain the material(s) and prevent or minimize migration into storm water runoff and conveyance systems. If the release has impacted on-site storm water, it is critical to contain the released materials on-site and prevent their release into receiving waters. If a spill of pollutants threatens storm water or surface water at the site, the spill response procedures outlined below must be implemented in a timely manner to prevent the release of pollutants.

- The Contractor's site superintendent will be notified immediately when a spill or the threat of a spill is observed. The superintendent will assess the situation and determine the appropriate response.
- If spills represent an imminent threat of escaping erosion and sediment controls and entering receiving waters, personnel will be directed to respond immediately to contain the release and notify the superintendent after the situation has been stabilized.
- Spill kits containing appropriate materials and equipment for spill response and cleanup will be maintained by the Contractor at the site.
- If oil sheen is observed on surface water (e.g. settling ponds, detention ponds, swales), action will be taken immediately to remove the material causing the sheen. The Contractor will use appropriate materials to contain and absorb the spill. The source of the oil sheen will also be identified and removed or repaired as necessary to prevent further releases.

- activities.

SPILL NOTIFICATION

In the event of a spill, the Contractor's site superintendent will make the appropriate notification(s), consistent with the following procedures: > A release or spill of a regulated substance (includes petroleum and petroleum products) must be reported to DENR immediately if any one of the following conditions exists:

- safetv.
- .

- gallons).

To report a release or spill, call DENR at 605-773-3296 during regular office hours (8 a.m. to 5 p.m. Central time). To report the release after hours, on weekends or holidays, call State Radio Communications at 605-773-3231. Reporting the release to DENR does not meet any obligation for reporting to other state, local, or federal agencies. Therefore, the responsible person must also contact local authorities to determine the local reporting requirements for releases. DENR recommends that spills also be reported to the National Response Center at (800) 424-8802.

CONSTRUCTION CHANGES (4.4)

When changes are made to the construction project that will require alterations in the temporary erosion controls of the site, the Storm Water Pollution Prevention Plan (SWPPP) will be amended to provide appropriate protection to disturbed areas, all storm water structures, and adjacent waters. The SDDOT Project Engineer will modify the SWPPP plan (DOT 298) and drawings to reflect the needed changes. Copies of changes will be routed per DOT 298. Copies of forms and the SWPPP will be retained in a designated place for review over the course of the project.

Γ	STATE OF	PROJECT	SHEET	TOTAL SHEETS
	SOUTH DAKOTA	BRF 6304(00)	24	42

If a spill occurs the superintendent or the superintendent's designee will be responsible for completing the spill reporting form and for reporting the spill to SD DENR.

Personnel with primary responsibility for spill response and clean up will receive training by the Contractor's site superintendent or designee. The training must include identifying the location of the spill kits and other spill response equipment and the use of spill response materials.

Spill response equipment will be inspected and maintained as necessary to replace any materials used in spill response

• The discharge threatens or is in a position to threaten the waters of the state (surface water or ground water).

The discharge causes an immediate danger to human health or

The discharge exceeds 25 gallons.

The discharge causes a sheen on surface water.

The discharge of any substance that exceeds the ground water quality standards of ARSD (Administrative Rules of South Dakota) chapter 74:51:01.

The discharge of any substance that exceeds the surface water guality standards of ARSD chapter 74:51:01.

The discharge of any substance that harms or threatens to harm wildlife or aquatic life.

The discharge of crude oil in field activities under SDCL (South Dakota Codified Laws) chapter 45-9 is greater than 1 barrel (42

CERTIFICATIONS

 Certification of Compliance with Federal, State, and Local Regulations

The Storm Water Pollution Prevention Plan (SWPPP) for this project reflects the requirements of all local municipal jurisdictions for storm water management and sediment and erosion control as established by ordinance, as well as other state and federal requirements for sediment and erosion control plans, permits, notices or documentation as appropriate.

All dimensions are out to out of bars. Quantities shown are for two (2) inlet and two (2) outlet channel walls. Cut in field as necessary.

ESTIMATED QUANTITIES						
ITEM	UNIT	QUANTITY				
Remove Channel Rock Wall	Ft.	64				
Channel Wall	Sq. Ft.	330				

Items 1 thru 3 are approximate quantities contained in Channel Wall and are for information only.

- 19.4 Cu.Yd. Class A45 Concrete, Box Culvert.
- 1449 Lb. Reinforcing Steel
- 137.7 Cu.Yd. Structure Excavation, Box Culvert

CHANNEL WALL:

- Height of channel walls shall vary to match top of wingwall and top of existing channel rock wall elevation.
- 2. The removal limits of the existing channel rock wall was assumed to be from the existing structure to 10 ft. beyond the ends of the new wingwalls. This length may be increased or decreased as determined by the engineer in the field.
- 3. The Contractor shall remove and salvage the existing rock channel wall. Excess rock deemed salvageable and not used to reconstruct rock channel wall shall be placed neatly in the right-of-way as directed by the Engineer to be picked up by the City of Madison for future maintenance use. The costs associated with removal and salvaging of the existing rock wall shall be incidental to the contract unit price per foot for "Remove Channel Rock Wall."
- 4. The Contractor shall rebuild the channel rock wall between the end of the box culvert wingwall and the undisturbed channel wall. Reinforced concrete cartilevered retaining walls shall be constructed between the end of the box culvert wingwall and the undisturbed channel rock wall. The salvaged rock from the rock wall shall be installed on top of the retaining wall footing. The rock fascia shall be vertical at the end of the box culvert wingwall and shall be warped to match the slope of the undisturbed wall. All costs associated with excavation for, and construction of, the retaining wall and resetting the rock fascia shall be incidental to the contract unit price per square foot for "Channel Wall".
- 5. The reset channel fascia rocks shall be positioned to interlock with the existing channel rocks at the ends of the reconstructed channel walls.

SPECIFICATIONS

- 1. DESIGN SPECIFICATIONS: AASHTO LRFD Bridge Design Specifications, 7th edition, with 2015 and 2016 interims
- 2. CONSTRUCTION SPECIFICATIONS: South Dakota Standard Specifications for Roads and Bridges, 2015 edition and required Provisions, Supplemental Specifications and/or Special Provisions as included in the Proposal.

GENERAL NOTES

- 1. DESIGN LIVE LOAD: HL-93. No construction loading in excess of legal load was considered
- 2. The design of the Barrel Section is based on a minimum fill height of one (1) foot and includes all subsequent fill heights up to and including the maximum fill height of five (5) feet (S1).
- 3. DESIGN MATERIAL STRENGTHS: Concrete: f`c = 4500 p.s.i. Reinforcing Steel: fy = 60,000 p.s.i.
- 4. All concrete shall be Class A45 conforming to Section 460.
- 5. All reinforcing steel shall conform to ASTM A615 Grade 60.
- 6. All exposed edges shall chamfered 3/4" inch.
- 7. Use 1 inch clear cover on all reinforcing steel EXCEPT as shown.
- 8. The contractor shall imprint on the structure the date of construction as specified and detailed on Standard Plate No. 460.02.
- 9. Care shall be taken to establish Working Points (W.P.) as shown on the wings.
- 10. Circled numbers in plan and elevation views on the general drawing are section I.D. Numbers (See SDDOT Materials Manual).
- 11. Cost of preformed expansion joint filler used in apron construction shall be incidental to other contract items.
- 12. Compaction of earth embankment and Box Culvert backfill shall be governed by the Specified Density Method.
- 13. The 24" RCP shall be installed by trenching it in after the Box Culvert has been backfilled to the top of the top slab

SUBSURFACE CONDITIONS

Station	Offset	Elevation	Material Description	Groundwate
9+85	19.5 ft. Rt.	1663.2 - 1657.7	Brown silt-clay with gravel layers	1654.8
		1657.7 - 1644.2	Coarse Sand and Gravel	
10+20	17.0 ft. Lt.	1663.7 - 1658.7	Brown silt-clay with gravel layers	1654.7
		1658.7 - 1644.7	Coarse Sand and Gravel	

Dewatering will be required for construction of the RCBC.

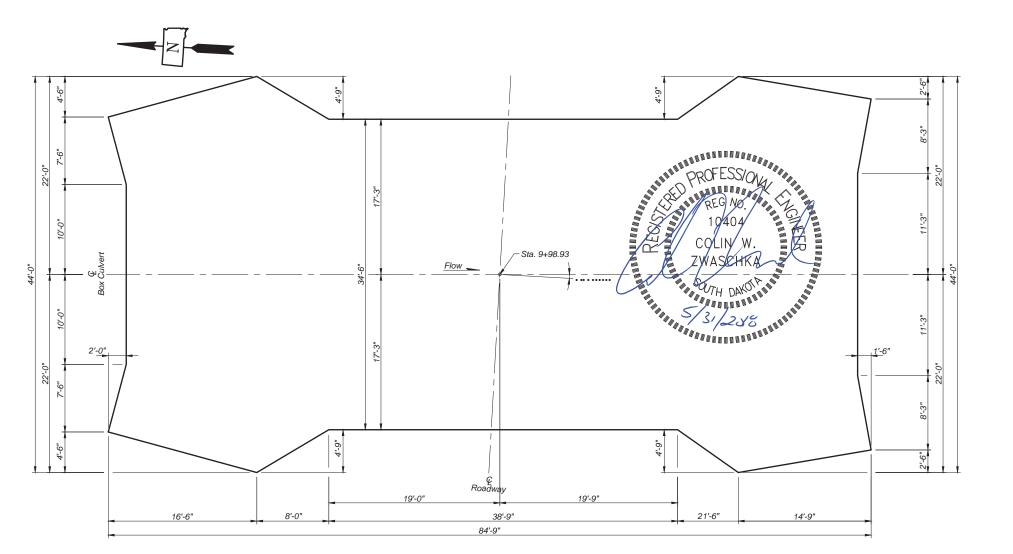

The Contractor shall use shoring or excavation techniques that minimize the amount of undermining of the rock masonry channel walls located both upstream and downstream of the existing structure during undercutting procedures. Any voids created under the rock masonry walls during construction of the RCBC shall be filled with a controlled density fill. This work is incidental to other bid items.

INCIDENTAL WORK, STRUCTURE

- 1. In place from Sta. 9+84 to 10+15 of the mainline is a triple 10'x5' reinforced concrete box culvert (37.0' barrel length) and a single span 25.2' long x 6.1' wide reinforced concrete slab sidewalk supported on concrete masonry walls.
- 2. The Contractor shall remove the reinforced concrete box culvert structure, the reinforced concrete slab sidewalk, and the concrete masonry channel walls in their entirety, or as directed by the Engineer. All portions of the structures not salvaged for future highway related use shall be disposed of by the Contractor at a site provided by the Contractor and approved by the Engineer in accordance with Environmental Commitments found in the grading plans.
- During demolition of the structure, efforts shall be taken to prevent material from 3. falling into the stream. Under no circumstances is asphalt allowed to fall into the creek
- 4. The foregoing is a general description of the in place structures and should not be construed to be complete in all details. Before preparing the bid, it shall be the responsibility of the Contractor to make a visual inspection of the structures to verify the extent of the work and materials involved.

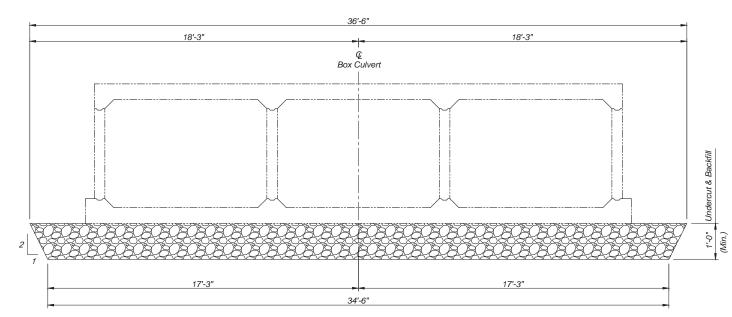

NOTICE - LEAD BASED PAINT

Be advised that the paint on the steel surfaces of the existing structure may contain lead. The Contractor should plan his/her operations accordingly, and inform his/her employees of the hazards of lead exposure.

OF S.D.	BRF 6304(00)	40	SHEETS 42	

CHAIN LINK FENCE:

- 1. The chain link fence fabric and supports shall conform to the South Dakota Standard Specifications Section 930 as modified by the following notes.
- The chain link fence fabric, wire ties, and miscellaneous hardware shall be galvanized and conform to AASHTO M181. The fence fabric shall be Type IV9 gauge wire woven in a 2 inch diamond mesh. Knuckled selvag shall be used on the top and bottom of the fence fabric.
- 3. A dark brown thermally extruded poly vinyl chloride coating shall be applied to the fence fabric, wire ties and all miscellaneous hardware.
- 4. The item "Chain Link Fence for Bridge Sidewalk" shall be paid for by the lineal foot. This payment shall be full compensation for furnishing all materials, labor, tools and equipment necessary or incidental to the construction of the chain link fence including chain link fence fabric, wire ties, and miscellaneous hardware, all to satisfactorily complete this work.

STEEL RAILING:

- 1. All railing posts shall be built vertical. Silicone seal around base plates if not flush with concrete.
- All structural steel parts for railing shall conform to ASTM A500, Grade B. Material less than 1/4" thick may be ASTM A1011, Grade 36. Rail post base plates shall conform to ASTM A709, Grade 36.
- 3. All anchor bolts and nuts for railing shall conform to ASTM A307. Washers shall conform to ASTM F436 and all components shall be galvanized in accordance with ASTM A153 or ASTM F2329, as applicable. The bolts shall be hex head "Structural" type with heavy hex nuts and round washers.
- All anchor bolts shall be tightened to a torque of 120 ft.-lbs. (approximate without the use of a calibrated torque wrench.)
- All steel railing shall be painted in accordance with Section 411 of the South Dakota Standard Specifications and the color shall be an approved brown (Federal Standard 595B color 30045).
- 6. Welding and weld inspection shall be done in accordance with AWS D1.1.
- 7. The costs of structural steel, welding, weld inspection, painting and galvanizing shall be incidental to the contract unit price per foot for "Steel Pedestrian Railing on Sidewalk."
- 8. The fabricator shall submit shop plans in accordance with the specifications. Send shop plan submittals to Banner Associates, Inc., 409 22nd Ave. S., P.O. Box 298, Brookings, SD 57006-0298 (colinz@bannerassociates.com). After review, corrections (if necessary), and approval by Banner Associates, Inc., The Office of Bridge Design will review the submittals, authorize fabrication, arrange for fabrication inspection, and distribute the shop drawings.
