

Appendix A – Socioeconomic Data

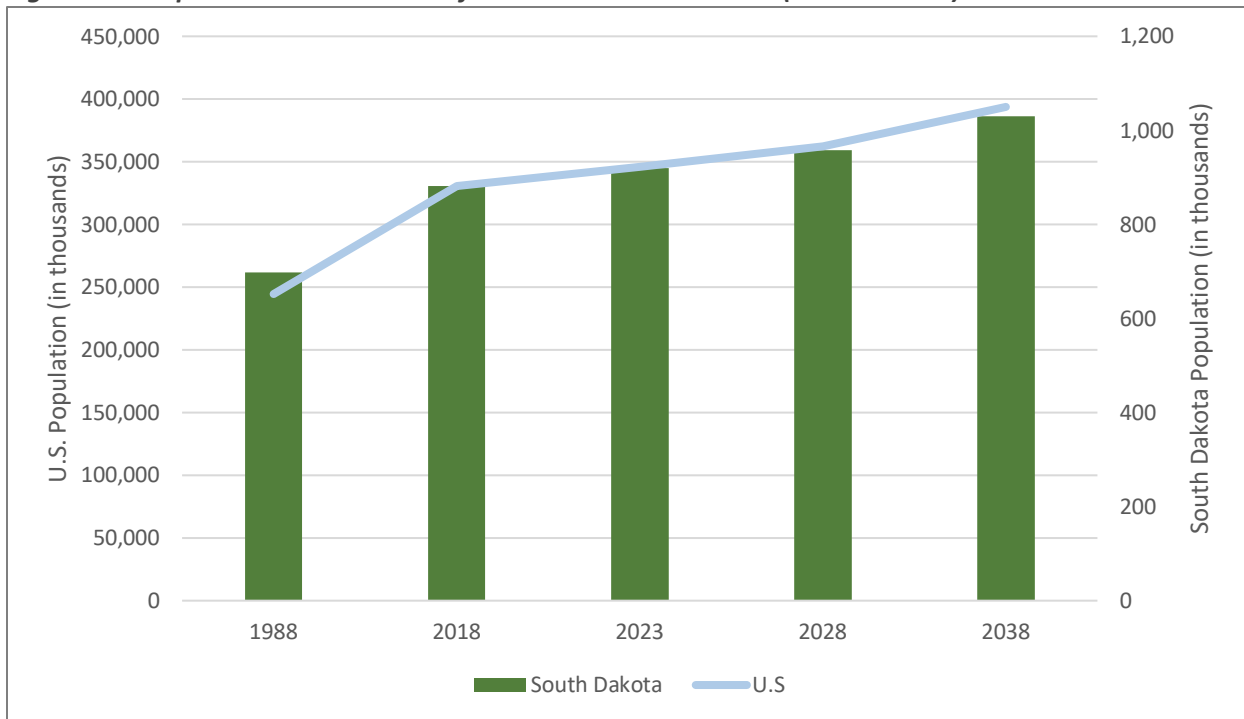

A.1. Introduction

This appendix presents the socioeconomic data used to support forecast analyses in **Chapter 4. Forecast of Aviation Activity and System Demand**. The data presented in this appendix is sourced from 2018 Woods & Poole Economics reports and uses a historic year of 1988, a base year of 2018, and projection years 2023 (five years), 2028 (10 years), and 2038 (20 years). This appendix provides comprehensive socioeconomic data for South Dakota at the county and statewide levels and a comparison to the U.S. population.

A.2. Population

Figure A-1 demonstrates the growth of population statewide, and in the U.S. during the projection period. As shown, the rate of growth is quite comparable, with the light blue trendline depicting U.S. population growth corresponding closely to the green bars depicting South Dakota’s population trend.

Figure A-1: Population Growth Trend for South Dakota and U.S. (In Thousands)

Sources: Kimley-Horn, 2020; Woods & Poole Economics, Inc

Table A-1 shows the population (in thousands) by county, as well as statewide and U.S. data. Thirty-seven of the 66 counties in South Dakota are anticipated to see a marginal decline in their population from 2018 to 2038, ranging from 0.1 percent decrease to 0.8 percent decrease. Minnehaha County and Pennington County are the highest populated counties in South Dakota, and both of these counties anticipate growth of 1.2 percent and 1.1 percent respectively. This is not surprising as the two largest cities are within these counties, Sioux Falls in Minnehaha County and Rapid City in Pennington County. Despite the majority of counties anticipated to see their populations decrease overall the state

anticipates a slight population growth of 148,000 new residents, corresponding to a compound annual growth rate (CAGR) of 0.8 percent.

Table A-1: Population by County (In Thousands)

A.3. Median Age

Figure A-2 shows the projected change in median age for South Dakota and for the U.S. The chart shows a strong correlation between them, with South Dakota projecting to have a median age slightly younger than the U.S. by 2038, but both increasing at a similar rate.

Figure A-2: Median Age Trends for South Dakota and the U.S.

Sources: Kimley-Horn, 2020; Woods & Poole Economics, Inc

Table A-2 shows the median age for the historic and base years, and throughout the projection period for all 66 South Dakota counties, the state, and the U.S. Forty-one counties in South Dakota are anticipated to experience a decline in the median age of between 1.5 percent and 0.1 percent. Overall, South Dakota’s median age is anticipated to increase slightly over the 20-year projection period from 37 years of age in 2018 to 39 years of age in 2038, corresponding to a CAGR of 0.2 percent. The U.S. median age has the same CAGR at 0.2 percent and is anticipated to increase from 38 to 40 years of age between 2018 and 2038.

A.4. Employment

Figure A-3 shows the employment trends for both South Dakota and the U.S. Employment numbers are on the rise for both the state and the nation as a whole, with South Dakota experiencing a slightly higher CAGR than the U.S. at 1.3 and 1.2 percent respectively, between 2018 and 2038.

Figure A-3: Employment Trends for South Dakota and the U.S. (In Thousands)

Sources: Kimley-Horn, 2020; Woods & Poole Economics, Inc

Table A-3 shows employment numbers for the 66 South Dakota counties, as well as statewide totals, and U.S. employment numbers for historic and baseline years, and projections over the planning period. All of the counties in South Dakota are anticipated to experience employment growth over the planning period, ranging from a CAGR of 0.2 percent to 2.4 percent between 2018 and 2038.

A.5. Gross Regional Product (GRP)

Figure A-4 presents the Gross Regional Product (GRP) and Gross Domestic Product (GDP) trends for South Dakota and the U.S. GRP and GDP are presented in 2009 dollars according to the Woods & Poole data used. As shown, both GRP and GDP are on the rise over the projection period, with South Dakota’s GRP increasing at a slightly faster rate than the U.S. GDP.

Figure A-4: GRP and GDP Trends for South Dakota and the U.S. (in Thousands, in 2009 Dollars)

Sources: Kimley-Horn, 2020; Woods & Poole Economics, Inc

Table A-4 shows the GRP for the historic and baseline years, as well as through the 20-year projection period. Lincoln County and Meade County are anticipated to experience the greatest percentage increase to their GRP, at a CAGR of 3.2 percent and 3.0 percent respectively. All but three South Dakota counties are anticipated to experience GRP growth over the projection period. Overall, South Dakota is anticipated to see a 2.1 percent increase to their GRP between 2018 and 2038, while the U.S. is comparable at a 2.0 percent increase.

Table A-4: GRP by County (in Thousands, in 2009 Dollars)

A.6. Per Capita Income

Figure A-5 shows the per capita income trends for South Dakota and the U.S. for historic and baseline years, as well as for the 20-year projection period. All amounts in this section are presented in 2018 dollars as reported by Woods and Poole. As shown, per capita income has increased significantly since 1988 and is anticipated to increase in the future, with U.S. per capita income expected to exceed \$250,000 and South Dakota’s per capita income expected to exceed \$120,000 by 2038.

Figure A-5: Per Capita Income Trends (in 2018 Dollars)

Sources: Kimley-Horn, 2020; Woods & Poole, Economics, Inc

Table A-5 shows the per capita income for each county, the state, and the U.S. As shown, the majority of South Dakota counties are anticipated to experience per capita income growth at a CAGR of four percent or more over the projection period. This results in an overall increase of \$71,170 between 2018 and 2038, which corresponds with a CAGR of 4.5 percent. The U.S. per capita income is also expected to increase, but at a lower CAGR of 1.2 percent over the projection period, corresponding to an increase of \$55,096 between 2018 and 2038.
