

A Rail to Trail Feasibility Study between Tabor and Platte is being completed to determine:

- What is the construction and maintenance cost of a trail?
- Where is there more or less support for a trail?
- What improvements would be needed to construct a trail along the corridor?

We're working on the
**Feasibility Study
 Rail to Trail
 Tabor to Platte**
 and need your input!

Most of the Tabor to Platte railroad right of way has been "railbanked." Although the route no longer carries trains, railbanking means the corridor is retained as a transportation resource in case railroad use might be needed in the future. Interim use of the corridor is allowed in the form of a multi-purpose trail, and the study's purpose is to understand if an interim trail is technically, politically, and financially feasible. The South Dakota Department of Transportation is administering the study, due to federal funding.

It is important to understand potential negative impacts to adjacent properties and plan for how those can be mitigated. To that end, we are seeking property owner input on specific adjacent land uses and the presence of farm crossings and driveways that can be documented and considered in the study process. We need your help to identify those specific needs relative to your property. If you are a landowner in the country, please take our supplemental Agricultural Landowner/Tenant survey.
